Numerical answers are published in a separate book.

PREFACE

Target your Maths has been written for pupils in Year 5 and their teachers.

The intention of the book is to provide teachers with material to teach the statutory requirements set out in the Year 5 Programme of Study for Mathematics in the renewed 2014 National Curriculum Framework

In the renewed Framework the Year 5 Programme of Study has been organised into eight domains or sub-domains.

Number – number and place value

Number - addition and subtraction

Number - multiplication and division

Number – fractions (including decimals and percentages)

Measurement

Geometry - properties of shape

Geometry – position and direction

Statistics

The structure of **Target your Maths 5** corresponds to that of the Year 5 Programme of Study. There is also a Review section at the end of the book.

All the statutory requirements of the Year 5 Programme of Study are covered in **Target your Maths 5**. Appendix I of the Teacher's Answer Book matches the statutory requirements and some essential non-statutory guidance with the relevant pages in this book. Most requirements are covered by more than one page. The author believes it is important that teachers have ample material from which to select.

Each single or double page lesson in this book is divided into four sections:

Introduction: the learning intention expressed as a target and, where necessary, clearly worked examples.

Section A: activities based upon work previously covered. This generally matches the requirements for Year 4 pupils. This section can be used to remind children of work previously covered, as well as providing material for the less confident child.

Section B: activities based upon the requirements for Year 5 pupils. Most children should be able to work successfully at this level.

Section C: activities providing extension material for the faster workers and for those who need to be moved quickly onto more challenging tasks. The work in this section generally matches the requirements for Year 6 pupils. Problems in Section C can also provide useful material for discussion in the plenary session.

The correspondence of the three sections A–C to the requirements for different year groups provides a simple, manageable structure for planning differentiated activities and for both the formal and informal assessment of children's progress. The commonality of the content pitched at different levels also allows for progression within the lesson. Children acquiring confidence at one level find they can successfully complete activities at the next level.

There is, of course, no set path through either the Year 5 Programme of Study or **Target your Maths 5** but teachers may find Appendices II and III in the Teacher's Answer Book useful for planning purposes. In these tables one possible approach is given to the planning of the curriculum throughout the year.

In Appendix II the **Target your Maths** pages for each domain are organised into a three term school year. In Appendix III the work for each term is arranged into twelve blocks, each approximately corresponding to one week's work. For the sake of simplicity blocks are generally based upon one domain only.

The structure as set out in Appendices II and III enables teachers to develop concepts progressively throughout the year and provides pupils with frequent opportunities to consolidate previous learning.

The author is indebted to many colleagues who have assisted him in this work. He is particularly grateful to Sharon Granville and Davina Tunkel for their invaluable advice and assistance.

Stephen Pearce

NUMBERS in a contract that the same of the

TARGET To read and write numbers to one million.

Numbers are made up from digits.

There are ten digits, 0 1 2 3 4 5 6 7 8 and 9.

158 is a three-digit number, 1583 is a four-digit number, and so on.

The way we read a digit depends upon its place in the number.

4926 is four thousand nine hundred and twenty-six.

49 263 is forty-nine thousand two hundred and sixty-three.

492 637 is four hundred and ninety-two thousand six hundred and thirty-seven.

1 492 637 is one million four hundred and ninety-two thousand six hundred and thirty-seven.

TAKE CARE when a number has zeros in it.

2091 is two thousand and ninety-one.

30 508 is thirty thousand five hundred and eight.

107 004 is one hundred and seven thousand and four.

1 Copy the table, writing each area in figures.

UK County	Area (km²)
East Sussex	one thousand seven hundred and ninety-one
Suffolk	three thousand eight hundred
Northumberland	five thousand and thirteen
Merseyside	six hundred and forty-five
Cumbria	six thousand seven hundred and sixty-seven
Cambridgeshire	three thousand three hundred and ninety
South Ayrshire	one thousand two hundred and two
West Yorkshire	two thousand and twenty-nine
Aberdeenshire	six thousand three hundred and eighteen
Conwy	one thousand one hundred and thirty

These figures also show the areas of UK counties. Write each area in words.

a)	Powys	5204 km ²	g) Isle of Wight	380 km ²
b)	Nottinghamshire	2159 km ²	h) Argyll and Bute	6930 km ²
c)	Somerset	4170 km ²	i) County Durham	2721 km ²
d)	Lincolnshire	6959 km ²	j) Norfolk	5371 km ²
e)	North Yorkshire	8608 km ²	k) Lancashire	3075 km ²
f)	Berkshire	1262 km²	l) Devon	6707 km ²

1 Copy the table, writing each population in figures.

UK City	Population
Chester	seventy-seven thousand and forty
York	one hundred and ninety-five thousand four hundred
Glasgow	five hundred and ninety-two thousand eight hundred and twenty
Coventry	three hundred and nine thousand eight hundred and six
Bath	eighty-four thousand and five
Leeds	seven hundred and seventy thousand nine hundred
Wells	ten thousand four hundred and two
Belfast	two hundred and sixty-seven thousand five hundred

2 Write the population of each of these UK cities in words.

Salisbury	50 000
Hull	258 700
Edinburgh	486 120
Ely	15 102
Manchester	502 000
	Hull Edinburgh Ely

f)	Cardiff	341 054
g)	Derry	85 016
h)	Sheffield	534 500
i)	Gloucester	123 205
i	Rirmingham	1 000 000

C

1 This table shows the number of passengers passing through some UK airports in one year. Copy the table, writing each number in figures.

Airport	Total Passengers		
Heathrow	seventy million		
Belfast	four million, sixteen thousand one hundred and seventy		
Leeds Bradford	two million seven hundred and fifty thousand and nine		
Edinburgh	eight million six hundred thousand seven hundred and fifteen		
Cardiff	one million four hundred and four thousand six hundred		
Liverpool	five million thirteen thousand nine hundred		
Gatwick	thirty-one million three hundred and seventy-five thousand		
Manchester	seventeen million seven hundred and sixty thousand		

2 Write the population of each city in words.

a)	Mumbai	12500000
b)	New York	8 244 900
c)	Auckland	504 830
d)	Cairo	6 758 581
e)	Moscow	11 551 000

f)	Hong Kong	7108000
g)	Sydney	3 749 902
h)	Rio de Janerio	6 323 037
i)	Shanghai	17836000
j)	Los Angeles	3 819 702

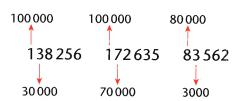

TARGET To compare and order numbers.

Example

Arrange 138 256, 172 635 and 83 562 in ascending order.

Look at the highest value digits first. If they are the same look at the next highest value.

The correct order is 83 562, 138 256, 172 635.

Put these numbers in order, starting with the smallest.

1 2167 1726 1672 2176
2 3459 3945 3549 3594
3 1875 1758 1857 1785
4 6932 6392 6239 6923
5 4867 4687 4678 4786

Copy and complete. 6 263 + = 5636307 + = 93076150 -= 21509445 — = 90451379 += 18792814 + = 28744428 -= 24285036 – = 3610 2911 + = 2951**I** 3072 + = 3672

Put these numbers in ascending order.

1 5492 4529 5249 4925

2 16738 16873 16837 17386

3 41982 114892 42189 121498

4 35358 35835 35385 35583

5 121210 122011 121102 120212

B

Work out the number that is halfway between each pair of numbers.

- 1 5600 ← 6200
- **2** 710 000 ← 800 000
- 3 13650 ← 13750
- **4** 212 900 ← 213 500
- **5** 5 960 000 ← 6 040 000
- **6** 126 000 ← 135 000

Use these digits once each.

4 1 7 9 2 5 8 4

Make two different 4-digit numbers which give:

- a) the largest possible total
- b) the smallest possible total
- c) the largest possible difference
- d) the smallest possible difference

PLACE VALUE OF DIGITS

TARGET To determine the value of each digit in a number.

The value of a digit depends upon its position in the number.

Example 2754863 M HTh TTh Th H T U 2 7 5 4 8 6 3 50 000 800 700 000 2754 863 2754 863 2754 863

Copy and complete by writing the missing number in the box.

1 587 = 500 + + 7

2 1326 = 1000 + + 20 + 6

3 4615 = 4000 + 600 + 10 +

 \bigcirc 2471 = \bigcirc + 400 + 70 + 1

3 734 = + 30 + 4

6 3168 = 3000 + 100 + + 8

6893 = + 800 + 90 + 3

8 1256 = 1000 + 200 + 50 +

 $10 5319 = \boxed{ +300 + 10 + 9}$

10 7675 = 7000 + 600 + + 5

12 2524 = 2000 + + 20 + 4

00

Write down the value of the digit underlined.

1 5<u>3</u>17 2 824<u>9</u>

4) 192<u>4</u>1 5) 1<u>6</u>5913

2 465 179

21 1 508 368

TARGET To count on or back in steps of 100, 1000 and 10000.

Examples

Count on four 100s from 70 830. 70 830 70 930 71 030 71 130 71 230

Count on 3000 from 127416. 127416 128416 129416 130416 Count back five tens from 4936. 4936 4926 4916 4906 4896 4886

Count back 400 from 108 327. 108 327 108 227 108 127 108 027 107 927

Count on in 10s.

- 1 70 from 2465
- 2 50 from 5293
- 90 from 1987
- 4 60 from 6152

Count back in 10s.

- **6** 80 from 7414
- 6 50 from 8381
- **2** 90 from 3669
- 8 70 from 5196

Count on in 100s.

- 9 600 from 5943
- 100 400 from 7608
- 1700 from 1721
- 12 900 from 6250

Count back in 100s.

- 1 700 from 5474
- 400 from 8232
- 15 800 from 4797
- 6 500 from 9185

8

Count on

- osix 100s from 63 870
- 2 nine 100s from 28 749
- 3 five 100s from 116 526
- 4 eight 1000s from 93 318
- 6 four 1000s from 251 934
- 6 seven 1000s from 72 552
- five 10 000s from 447 681
- 8 nine 10 000s from 839 403
- eight 10 000s from 80 767

Count back

- 00 four 100s from 65 328
- seven 100s from 289 275
- 100s from 73 439
- nine 1000s from 102161
- (I) five 1000s from 94 505
- 1000s from 326 314
- 16 six 10 000s from 416 920
- nine 10 000s from 857 075
- 18 seven 10 000s from 704 819

C

Start at 1 396 419. Count on

- 1 eight 100 000s
- 2 five millions
- 3 nine 1000s
- 4 seven 10 000s

Start at 7 613 085. Count back

- six millions
- 6 eight 1000s
- 7 seven 100 000s
- 8 five 10 000s

What number did I start from?

- 9 I count on 80 000 and reach 2 719 340.
- 10 I count back 4 000 000 and reach 8 267 189.
- 1 count on 500 000 and reach 2 045 713.
- 12 I count back 60 000 and reach 4 371 596.
- 13 I count on 7000 and reach 5 903 420.
- 14 I count back 900 000 and reach 3 561 084.

ROUNDING ELLE MUIM BY A DADE 7

TARGET To round numbers to the nearest 10, 100, 1000, 10000 or 100000

If rounding:

to the nearest 10, look at the units column to the nearest 100, look at the 10s column to the nearest 1000, look at the 100s column and so on

5 or more, round up Less than 5, round down Example

Round 358 472:

to the nearest 10 \rightarrow 358 470 to the nearest 100 \rightarrow 358 500 to the nearest 1000 \rightarrow 358 000 to the nearest 10000 \rightarrow 360 000 to the nearest 100 000 \rightarrow 400 000

5 3 543 277	10 497 080 15 2 050 800	20 7954003

TARGET To count forwards and backwards through zero and to interpret negative numbers in context.

Negative numbers Below zero Have a minus sign

Positive numbers Above zero

We often use negative numbers in the context of temperature.

Example

c) A and C

a) at B and rose 5°

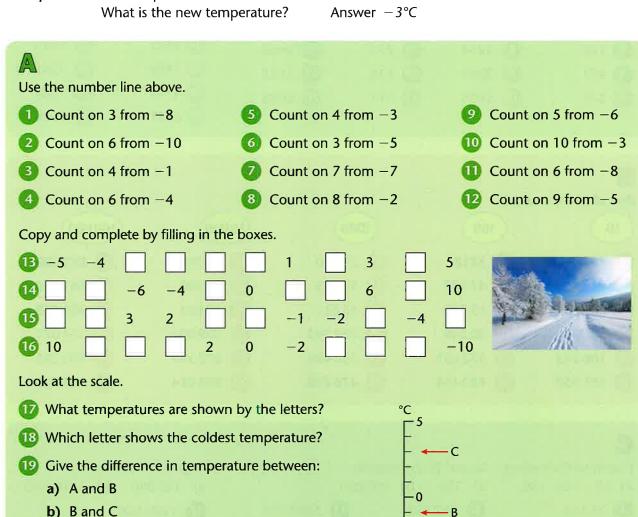

b) at B and fell 4°

20 What would the temperature be if it was:

c) at A and rose 6°

d) at C and fell 5°.

The temperature is 2°C. It falls 5°C.

°C 10

5

Use the number line on page 8.

- Count on 7 from −9
- 2 Count on 6 from -3
- \bigcirc Count on 10 from -6
- Count on 8 from -1
- 5 Count back 5 from 2
- 6 Count back 12 from 8
- Count back 7 from 0
- 8 Count back 6 from 5

Copy and complete the sequences.

- 2

- -3
- -2

- **I** −10 −8

7

5

- 3

2

- 15 What temperatures are shown by the letters?
- 6 Give the difference in temperature between:
 - a) A and C
 - b) B and D
 - c) B and C
 - d) A and D
- What would the temperature be if it was:
 - a) at A and rose 10°
 - b) at B and rose 5°
 - c) at C and fell 10°?

Put > or < in each box.

- -2
- 1

0

-9

- - -8

- -2

Find the difference between:

- -6 and -1
- 2 7 and 1
- 0 and -3
- 3 4 and -1
- 2 and -4
- $\frac{4}{1}$ -1 and 9
- -5 and 4.

Put these numbers in order, smallest first.

- œ
- 2
- œ

Copy and complete these tables showing changes in temperature.

TARGET To read Roman numerals to 1000.

The Ancient Romans used letters to stand for numbers. Roman numerals were used in Europe until they were replaced by the Arabic numbers we use today. However, Roman numerals are still used for some things, such as the names of kings and queens or on some clock faces.

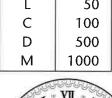

Letter	Values
1	1
V	5
X	10
L	50
С	100
D	500

Repeated numbers are added. V, L and D are never repeated. Only repeat a number three times.

Example
$$CCC = 100 + 100 + 100 = 300$$

Smaller value first means subtract. **Example** CMXC = 1000 - 100 + 100 - 10 = 990

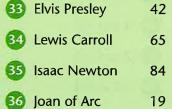

a) Only subtract one number from another. **Example** 80 is LXXX not XXC (50 + 30 not 100 - 20)

b) Only subtract I, X and C, not V, L or D. **Example** 450 is CDL not LD (400 + 50 not 500 - 50)

c) Only subtract the nearest value out of I, X and C. **Example** 490 is CDXC not XD (400 + 90 not 500 - 10)

A					
Writ	e as Arabic	num	bers.		
0	VII		9	LXVIII	
2	XXVIII		10	XCIV	
3	XLIV		0	XIX	
4	XC		D	LXXXI	
5	XXXV		B	XLIII	
6	LXXII		14	XXIV	
7	LIX		(B)	LXXVII	
8	XLVI		16	XCVI	
Write	e as Roman	num	erals.		
1	39	22	91	27	26
18	40	23	85	28	45
19	93	24	48	29	63
20	54	25	76	30	12
2	69	26	37	3	99

Roman numerals are sometimes used on gravestones and memorials. Copy the name and age at which each of these famous people died, changing the age to Roman numerals. Abraham Lincoln 56 Elvis Presley 42

52

Winston Churchill	90
38 Leonardo da Vinci	67
The state of the s	

39 Wolfgang Amadeus Mozart	35
40 Charlie Chaplin	88
William Shakespeare	52

B

Write in Arabic numbers.

- 1 CXLVII
- OCXXIX
- CDIX
- 🔟 CXCVII
- OCCCLX
- **1** DCCCXVI
- CCXXVIII
- CDLV
- CCCXCII
- **B** DCCLXXX
- 6 CMLXXIV
- (I) CCCXIV
- 7 DCCLII
- (B) CMXXXIII
- O DXLI
- **1** CCLXXXIX

Write in Roman numerals.

- **1** 322
- 22 117
- **2** 525

- <u>18</u> 995
- **23** 471
- 28 198

- **1** 503
- 🥝 756
- **29** 942

- **264**
- **23** 808
- **30** 434

- **21** 649
- 26 384
- **3** 879

Write these dates as they would have been written by Anglo-Saxon historians, in Roman numerals.

- **22** AD 43
- Romans invade Britain.
- 3 AD 126
- Hadrian's Wall completed.
- 3 AD 180
- Romans defeated in Scotland.
- 35 AD 410
- Romans leave Britain.
- 36 AD 597
- St. Augustine brings Christianity to Britain.
- St. Paul's Cathedral built in London.
- 38 AD 793
- First Viking raids.
- 4D 878
- Alfred the Great burns the cakes and defeats the Danes.
- 40 AD 1066
- **Battle of Hastings**

C

Roman numerals are often used on gravestones and memorials.
Change the dates of the following monarchs'

William I

reigns to Arabic numbers.

- MLXVI to MLXXXVII
- Richard I
- MCLXXXIX to MCXCIX
- 3 Edward I
- MCCLXXII to MCCCVII
- 4 Henry V
- MCDXIII to MCDXXII
- 5 Henry VIII
- MDIX to MDXLVII
- 6 Elizabeth I
- MDLVIII to MDCIII
- Charles I
- MDCXXV to MDCXLIX
- George III
- MDCCLX to MDCCCXX
- 9 Victoria I
- MDCCCXXXVII to MCMI
- 10 George VI
- MCMXXXVI to MCMLII

At the end of a film, the year it was made is shown in Roman numerals.

Write the year these films were made in Roman numerals.

- **11** Up 2009
- **1** ET 1982
- **13** Mary Poppins 1964
- 1937 Snow White and the Seven Dwarfs
- 15 Winnie the Pooh 2011
- 1959 Sleeping Beauty
- Toy Story 1995
- Bedknobs and Broomsticks 1971
- 19 Finding Nemo 2003
- 20 Bambi 1942
- Write the date of the year in which you were born.

TARGET To practise adding and subtracting large numbers mentally.

A

Write the answer only.

- 1 35 + 47
- 2 58 + 36
- 3 27 + 58
- 46 + 25
- 3 73 + 19
- 6) 39 + 34
- 92 26
- **8** 75 48
- 9 53 35
- 10 84 47
- **1** 61 38
- 12 90 54
- 85 + 49
- **1** 68 + 54
- **1** 96 + 78
- 16 54 + 56
- 19 + 67
- 18 87 + 34
- **126 39**
- 20 151 76
- **21** 105 67
- 22 132 83
- 23 114 49
- **24** 143 56

B

Write the answer only.

- 157 + 27
- 2 324 + 68
- 419 + 46
- 4 172 55
- 6 293 49
- **6** 580 28

Copy and complete.

- 76 + = 162
- 9 + 59 = 153
- 10 142 = 75
- **1** 67 + = 112
- \bigcirc -74 = 49

Write the answer only.

- **1** 840 + 570
- **1** 5900 + 9500
- **1** 233 000 67 000
- 102000 48000
- **1** 6500 + 7500
- 18 97000 + 89000
- 1210 840
- **20** 16 000 7500
- **21** 73 000 + 98 000
- **2** 480 + 670
- **23** 512 340

C

Write the answer only,

- 1 275 + 46
- 2 893 + 97
- 3 231 59
- 4 613 78
- **3** 356 + 74
- 6 464 + 89
- **7** 340 92
- **8** 706 37
- 9 388 + 22
- **10** 977 + 36
- **1** 854 68
- 12 420 51

Copy and complete.

- **B** 690 + = 1670
- 4700 = 120000
- **15** 16 200 = 8900
- **1** 55 000 + = 141 000
- \blacksquare + 690 = 1460
- $20 \quad \boxed{ -6500 = 4800}$
- 21 72 000 + = 151 000
- 22 + 9800 = 13300
- 23 1440 = 750
- $\boxed{-370\,000 = 930\,000}$

TARGET To use an understanding of place value to add and subtract large numbers mentally.

A

Write the answer only.

- 1 2035 + 50
- 2 1647 + 8000
- 3 1500 + 309
- 4 204 + 5210
- 3 7281 4000
- **6** 4940 700
- **2168 160**
- 8 3524 3004
- 9 2275 + 600
- 10 4198 + 2000
- **1** 34 + 7406
- 8053 + 710
- **B** 1750 30
- **14** 6304 5000
- **15** 3827 27
- **16** 8195 1005
- **17** 3904 + 7000
- **18** 6515 + 400
- **19** 2040 + 357
- 20 880 + 5200
- **21** 4755 200
- **22** 3286 80
- 23 1279 209
- **24** 6358 6050

8

Write the answer only.

- 170 250 + 40 000
- 45 394 + 8000
- **3** 231 816 + 25 000

B

Round to the nearest 10, estimate and then work out. Check your answer.

- 163 + 126
- 2 345 + 174
- **3** 422 178
- 4 869 253
- 5 178 × 2
- 6 153 × 6
- 7 185 ÷ 3
- 8 252 ÷ 8

Round to the nearest 100, estimate and then work out. Check your answer.

- 9 2795 + 2473
- 10 4317 + 1582
- **11** 5174 3358
- 7526 1914
- 1384 × 4
- 14 1526 × 7
- 15 2635 ÷ 5
- 6770 ÷ 9

C

Choose the correct answer and then work out to check.

- 1 52.76 + 28.49
 - a) 80·15 c) 81·25
 - b) 80.25 d) 82.15
- 2 63.18 39.62
 - a) 23.46 c) 24.46
 - b) 23.56 d) 24.56

Copy and complete.

- **3** 5 9.5 + 364. = 944.2
- $48 \ \ \cdot 53 17.8 \ \ = 64.69$
- $\boxed{ }$ 641. $\boxed{ }$ 3 $\boxed{ }$ 2.9 = 278.7
- $6 \ 46.6 + 2 87 = 72.55$

Estimate and then work out. Check your answer.

- 7 345.3 + 181.9
- 8 678.2 + 257.5
- 9 45.27 + 39.35
- 10 56.61 + 46.48
- 1 721.8 249.2
- **12** 954.6 373.7
- B 63.29 18.73
- 14 81.81 47.54

TARGET To solve number problems involving addition and subtraction.

A

- 1 Find two numbers with:
 - a) a total of 100 and a difference of 50
 - b) a total of 100 and a difference of 26
 - c) a total of 200 and a difference of 72.
- 2 I think of a number. I add 78. I take 126. The answer is 236. What is my number?
- I think of a number.
 I take 63.
 I add 82.
 The answer is 174.
 What is my number?

Copy and complete by writing the missing digits in the boxes.

$$69 + 3 = 147$$

$$13 - 9 = 95$$

$$1 \boxed{2-8} = 74$$

0

- Find two numbers with:
 - a) a total of 500 and a difference of 156
 - b) a total of 1000 and a difference of 338
 - c) a total of 150 and a difference of 54.
- 2 I think of a number. I subtract 247. I add 385. The answer is 619. What is my number?
- I think of a number.
 I add 176.
 I subtract 493.
 The answer is 648.
 What is my number?

Copy and complete.

- 5 4 9 + 6 8 2 4
- 6 7 0 - 2 9 6 1 2
- 7 5 8 - 7 3 3 4 2

C

- 1 Find two numbers with:
 - a) a total of 10 000 and a difference of 2186
 - b) a total of 2500 and a difference of 718
 - c) a total of 318 and a difference of 132.
- 2 I think of a number. I add 1628. I subtract 847. The answer is 2356. What is my number?
- I think of a number.
 I subtract 793.
 I add 1428.
 The answer is 4175.
 What is my number?

Copy and complete.

4			5		7
	+	1		9	
		3	9	4	3

- 5 3 6 F + 5 9 6 3 1 1
- 6 7 1 - 1 2 1 3 8 1 3

TARGET To solve addition and subtraction multi-step problems.

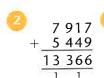

Example

A library has 7917 fiction books and 2468 fewer non-fiction books. There are 4708 books in the children's section. How many books are there in the adult section?

- Find the number of non-fiction books.
- Find the total number of books in the library.
- Find the number of adult section books.

Answer There are 8658 books in the adult section.

- 1 There are 113 children in Year 5. 58 are boys. 36 of the girls are in the choir. How many of the Year 5 girls are not in the choir?
- 2 One tin has 84 biscuits. Another has 48. Ninety-seven are eaten. How many are left?
- In an orchard there are 168 apple trees, 126 pear trees and 75 cherry trees. How many trees are there in the orchard altogether?
- 4 There are 260 children and 87 fewer adults in a cinema. How many people are in the audience altogether?
- A farmer has 157 brown cows and 183 black and white cows. 251 of the cows have been milked. How many have not been milked?

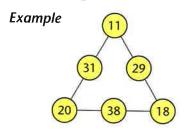

- B
- 1 Elroy's book has 407 pages. He is on page 186. He reads another 59 pages. How many pages are left?
- 2 Seventy-four fewer children come to school by car than walk. 211 walk. 65 come in other ways. How many children go to the school?
- 3 George has 739 stamps in two albums. 294 are in his blue album and he has 158 British stamps in his red album. How many foreign stamps are there in his red album?
- 4 A supermarket has 1350 bottles of milk for sale. There are 169 more green top than red top bottles. 465 of the bottles are red top. How many blue top bottles are for sale?

- C
- 1 In an election 32 736 people vote. 14 485 vote for the winner and 13 726 for the candidate in second place. How many people vote for the only other candidate?
- 2 Jocelyn has £8376 in her bank account. In the next month she takes out £4595 for a new car and a further £1806. Her salary of £2649 is paid in. How much is in her account at the end of the month?
- 3 In one month a supermarket sells 5847 cans of tomato soup, 3734 cans of vegetable soup and 2485 cans of chicken soup. The combined sales of these three varieties is 3728 greater than the total sales of all the other varieties of soup. How many cans of soup were sold during the month altogether?

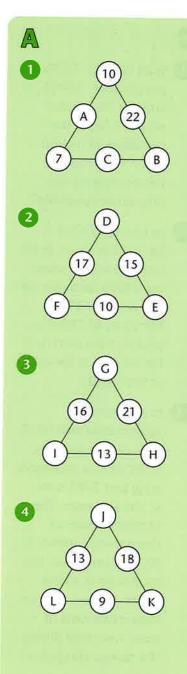

TARGET To solve number puzzles involving addition and subtraction.

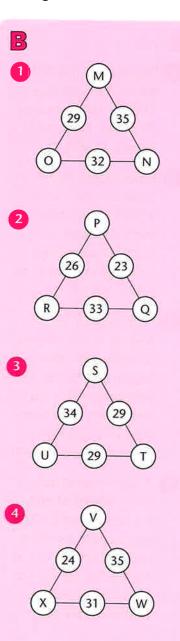

In these triangular arithmagons the pair of numbers at the end of each side are added together to give the number between them.

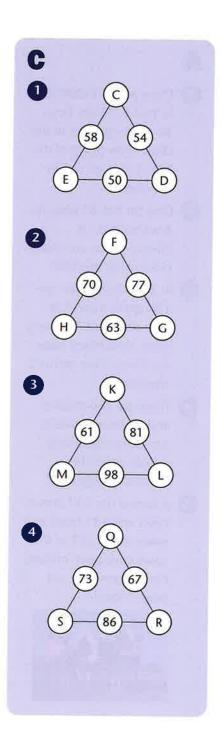

11 + 18 = 29 18 + 20 = 3820 + 11 = 31

Find the missing numbers in these arithmagons.

TARGET To solve number puzzles involving addition and subtraction.

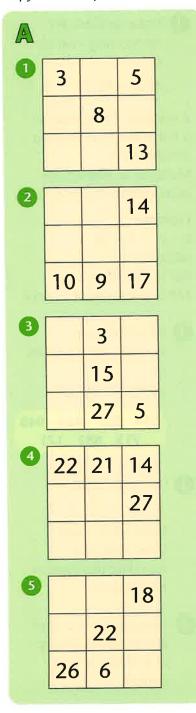

In a magic square the sum of each row, column and diagonal is the same.

21	10	17
12	16	20
15	22	11

Example

Row	15 + 22 + 11 = 48
Column	10 + 16 + 22 = 48
Diagonal	11 + 16 + 21 = 48

Copy and complete the following magic squares.

gic sc	gic squares.

TARGET To identify multiples.

A multiple of a number can be divided by that number without leaving a remainder.

Example

 $24 \div 6 = 4$

 $56 \div 6 = 9 r 2$

 $120 \div 6 = 20$

 $3000 \div 6 = 500$

24, 120 and 3000 are multiples of six. 56 is not a multiple of six.

A

Write down the first six multiples of:

1 3

3 6

2 4

4 9.

Write Yes or No.

S Is 78 a multiple of 2?

6 Is 25 a multiple of 3?

Is 48 a multiple of 4?

8 Is 95 a multiple of 5?

9 Is 130 a multiple of 10?

Is 56 a multiple of 6?

Is 56 a multiple of 7?

ls 56 a multiple of 8?

Which number should not be in the box?

Multiples of 5 65, 130, 151, 115

Multiples of 7 74, 63, 140, 56

Multiples of 8 64, 88, 72, 84

Multiples of 9 45, 39, 72, 108 8

Write down the first six multiples of:

1 7

3 15

2 12

4 99.

Write True or False.

48 is a multiple of 3.

6 152 is a multiple of 5.

42 is a multiple of 4.

8 72 is a multiple of 6.

91 is a multiple of 7.

104 is a multiple of 8.

109 is a multiple of 9.

111 is a multiple of 11.

140 is a multiple of 20.

4 510 is a multiple of 50.

150 is a multiple of 100.

16 360 is a multiple of 12.

Write down:

the 20th multiple of 8

the 4th multiple of 19

12 the 13th multiple of 12

the 5th multiple of 22.

C

Make up a rule for recognising multiples of:

a) 2

b) 10

c) 5.

A number is a multiple of 3 if the sum of its digits is divisible by 3.

Multiples of 3 which are

Multiples of 3 which are even are also multiples of 6.

Examples

8 + 7 + 3 = 18(divisible by 3) 387 is a multiple of 3 378 is a multiple of 3 and 6

Which of these numbers are multiples of:

a) 3

b) 6?

534 267 463 948 715 882 171

3 Use these digits.

2 3 5 7 8

Make up as many three-digit and four-digit multiples of 6 as you can.

4 Investigate the 2 digit and 3 digit multiples of 9. What do you notice?

TARGET To find all the factors of a number and common factors of two numbers.

Factors are numbers that divide exactly into another number.

Two or more numbers may have common factors as well as 1.

The largest of these is the highest common factor.

Examples

Factors of 12 1, 2, 3, 4, 6, 12 Factors of 30 1, 2, 3, 5, 6, 10, 15, 30

Common factors of 12 and 30 1, 2, 3, 6

Highest common factor of 12 and 30 is 6.

		V
y	ð.	١
h		7

Copy and complete the second factor in each pair.

- 1 $16 \rightarrow 2$ and
- 2 35 \rightarrow 7 and
- **3** 44 → 11 and
- 4 $27 \rightarrow 3$ and
- **6** 40 → 5 and
- 6 24 → 8 and
- 7 90 → 9 and
- 8 $48 \rightarrow 6$ and
- 28 → 4 and
- 10 72 → 12 and
- 100 → 2 and
- $\bigcirc 5 \rightarrow 5 \text{ and } \bigcirc$

Find all the factors of the following numbers. The number of factors is shown in brackets.

- **B** 8 (4)
- 15 (4)
- 14 25 (3)
 - 18 32 (6)
- **15** 22 (4) **19** 60 (12)
- 18 (6)
- 20 36 (9)

0.0

Find all the factors of:

- 1 98
- 9 90
- 2 52
- 132
- **3** 66
- 140
- 4 63
- 108

- 7 102
- **124**

16 112.

- 8 78

Find the common factors of each pair of numbers.

- 0 6, 9
- 23 15, 20
- 18 8, 10
- 26 14, 35
- 12, 16
- **20** 8, 12
- 20 18, 30
- **28** 6, 14
- **20, 30**
- **24, 36**
- **22** 40, 100
- **30** 12, 18
- **24, 32**
- **3** 20, 25
- **24** 12, 15
- **27, 36**

C

Find all the factors of:

- 133
- **5** 176
- 2 138
- 6 182
- 3 144
- 7 184
- **4** 162
- **8** 250.

Find the highest common factor of each group of numbers.

- 9 6, 12, 16
- 10, 25, 100
- 16, 24, 40
- 12 6, 12, 24
- **13** 20, 50, 100
- 12, 18
- **1**5 8, 16, 20
- 16 21, 28, 35
- 10 50, 75, 100
- 18, 36, 72
- 19 30, 60, 75
- 20 36, 48, 60

TARGET To identify prime numbers and composite numbers.

A prime number is a number which is divisible by only two different numbers: by itself and by one.

The first four prime numbers are 2, 3, 5 and 7. Notice that 1 is *not* a prime number. 4, 6, 8, 9 and 10 are not prime numbers because they are divisible by at least one of the first four prime numbers.

To find out if a two-digit number is a prime number you need to work out if it is divisible by one of the first four prime numbers, 2, 3, 5 and 7. A whole number which is not a prime number is called a composite number.

Examples

29 is not divisible by 2, 3, 5 or 7. 30 is divisible by 2, 3, and 5.

29 is a prime number.30 is a composite number.

Write down the prime number in each group.

- 1 4, 5, 6
- 2 9, 10, 11
- 27, 28, 29
- 37, 38, 39
- **6** 43, 44, 45
- 6 51, 52, 53
- 61, 62, 63
- 8 77, 78, 79
- 9 Find the next prime number:
 - a) after 20
 - **b)** after 32.
- Find all the prime numbers below 50.There are 15.Remember, 1 is not a prime number.
- Explain why 730 is not a prime number.

3

Write down the two numbers in each group which are *not* prime numbers.

- 1 1 2 3 4
- 2 16 17 18 19
- 3 21 31 41 51
- 4 27 37 47 57
- 5 63 73 83 93
- 6 61 71 81 91

Write down the next prime number after:

- **7** 8
- **1** 62
- **8** 24
- **1** 80
- 9 38
- **1** 90
- **1** 53
- 14.
- Find all the prime numbers below 100.
 There are 25.
- 16 Explain why these numbers are composite numbers.
 - a) 1235
- **b**) 9476

C

In the questions in this section you may need to work out if a number is divisible by prime numbers other than 2, 3, 5 and 7.

Example

121 is not a prime number because it is divisible by 11.

Decide whether each number is or is not a prime number.

- 105
- 6 143
- 2 113
- 7 149
- 3 119
- 8 152
- 4 131
- 9 163
- **5** 137
- **10** 201

Explain why the following numbers are composite numbers.

- **1**17
- 16 221
- 133
- **1** 253
- **B** 141
- 18 267
- 161
- **1**295
- **1**76
- 20 323

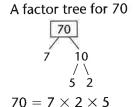

TARGET To know and use the vocabulary of prime numbers, prime factors and composite numbers.

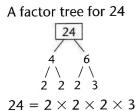

Factors are numbers that divide exactly into another number. A prime number is a number that is only divisible by itself and one. A composite number is a number which is not a prime number.

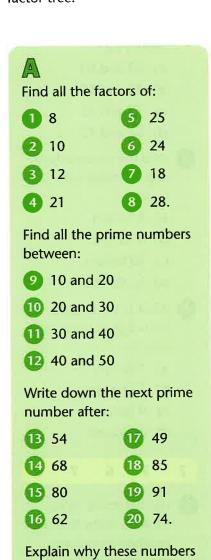

PRIME FACTORS

A factor which is also a prime number is a prime factor.

To find the prime factors of a number we can use a factor tree.

are not prime numbers.

C	100	eles III a chea	O THE O
Copy and complete.			
1	7 15 × 16 =	13	19 × 30 = 900
$2 \boxed{} \div 6 = 74$	8 13 × 14 =	14 = 14	20 × 200 = 1600
3	9 17 × 18 =	15	$21 \times 50 = 30000$
$4 \qquad \div 9 = 85$	10 192 ÷ 12 =	16 ÷ 49 = 11	$22 \times 400 = 28000$
5	1 256 ÷ 16 =	÷ 51 = 18	$23 \times 70 = 3500$
6	198 ÷ 18 =	18	24

TARGET To multiply and divide whole numbers by 10, 100 and 1000.

Multiplying – digits move to the left

Dividing – digits move to the right

Examples

 \times/\div by 10 – digits move 1 place \times/\div by 100 – digits move 2 places

 \times /÷ by 1000 – digits move 3 places

 $756 \times 10 = 7560$ $819 \times 100 = 81900$

 $43 \times 1000 = 43\,000$

 $386100 \div 10 = 38610$

 $9400 \div 100 = 94$

 $152\,000 \div 1000 = 152$

13 How many pounds is ten thousand pence?

What is 10 km in millimetres?

15 What is 25 kg in grams?

There are 50 pins in each packet. There are 40 packets in each box. How many pins are there in 2000 boxes?

How many pounds is four hundred 5p coins?

To recognise and use square numbers. TARGET

When a number is multiplied by itself you get a square number. They are called square numbers because they make square patterns.

$$2^2 = 2 \times 2 = 4$$

$$3^2 = 3 \times 3 = 9$$

$$4^2 = 4 \times 4 = 16$$

 Complete this table up to 12^2 .

$$1^2 = 1 \times 1 = 1$$

$$2^2 = 2 \times 2 = 4$$

$$3^2 = 3 \times 3 = 9$$

Work out the area of each square.

- 4 800²
- $60^2 + 50^2$
- 5000^{2}
- $10^{90^2} 30^2$
- $6 1000^2$
- $12 80^2 + 40^2$

Lagrange's Theorem

Every whole number can be written as the sum of four or fewer square numbers.

Examples

$$19 = 16 + 1 + 1 + 1$$

$$35 = 25 + 9 + 1$$

Make the following numbers from four or fewer square numbers.

- **B** 23
- 123
- **14** 31
- 20 142
- **15** 48
- **21)** 483
- **16** 63
- **22** 933
- **17** 79
- **23** 3485
- 18 96
- **24** 8058

TARGET To use and understand square and cube numbers.

Examples

A square number is a number multiplied by itself. They make square patterns.

A cube number is a number multiplied by itself and multiplied by itself again.

$$3^2 = 3 \times 3 = 9$$

3 squared = 9

$$2^3 = 2 \times 2 \times 2 = 8$$

2 cubed = 8

Copy and complete.

$$1 2^2 =$$

$$6)$$
 $2 = 81$

$$2 10^2 =$$

$$\sqrt{2} = 1$$

$$4) 5^2 =$$

$$2 = 12^{\circ}$$

$$12^2 =$$

$$0^2 = 64$$

Copy and complete, continuing the pattern for the first six rows.

$$1^2 = 1$$

$$2^2 = 1 + 3 =$$

$$3^2 = 1 + 3 + 5 =$$

$$4^2 = 1 + 3 + 5 + 7 =$$

B

Copy and complete.

$$10^2 = 1600$$

$$6 \quad \boxed{}^3 = 125$$

$$2 = 3600$$

$$7^3 =$$

$$3 - 2 = 900$$

$$40 \quad \boxed{}^2 = 400$$

$$912^3 =$$

$$10$$
 $3 = 1000$

Answer

D Copy and complete this table for all cube numbers to 123.

Cube Calculation

$$1^3 = 1 \times 1 \times 1 = 1$$

$$2^3 = 2 \times 2 \times 2 = 8$$

$$3^3 = 3 \times 3 \times 3 = 27$$

C

Copy and complete.

$$1 - 2 = 250000$$

$$6 20^3 =$$

$$2 = 4900$$

$$60^3 =$$

$$3 \quad \boxed{}^2 = 40\,000$$

$$4 \quad \boxed{}^2 = 1\,000\,000$$

9
$$70^3 =$$

$$| | |^2 = 12100$$

$$15^3 =$$

Copy and complete this pattern for all square numbers to 202.

$$0^2 = 0$$

$$1^2 = 0 + 1 = 1$$

$$2^2 = 1 + 3 = 4$$

$$3^2 = 4 + 5 = 9$$

$$4^2 = 9 + 7 = 16$$

Add each successive odd number to the previous square number to find the next.

TARGET To use a formal written method for short multiplication.

Examples

A

Copy and complete.

- 1 49 7 167 × 2 × 5
- 2 36 8 472 × 6 × 7

- What is the biggest remainder you can have when you divide a number by 8? Give a reason for your answer.
- 10 Balloons are sold in packets of eight. How many packets can be made from 150 balloons?
- Six people can sit at each table. How many tables are needed for 175 people?
- Sweets cost 15p each.

 How many can be bought for one pound?
- A ferry can carry 25 cars in one crossing of a river. There are 186 cars queuing to use the ferry. How many crossings will it take to clear the queue?
- How many £20 notes are needed to pay £325?

TARGET To interpret remainders appropriately for the context.

Examples

There are 6 children to each table. There are 27 children in a class. How many tables are needed? $27 \div 6 = 4 \text{ r } 3 \text{ (Round up.)}$

Answer 5 tables are needed.

There are four cakes in each box. 30 cakes are baked. How many boxes can be filled? $30 \div 4 = 7 \text{ r } 2 \text{ (Round down.)}$ Answer 7 boxes can be filled.

- 1 There are 29 children in a class. How many pairs can be made?
- Christmas cards are sold in packs of 10. Nina needs 32 cards. How many packs will she need?
- 3 Each car can carry 3 children. How many cars are needed to carry 16 children?
- 4 A garage has 26 tyres. How many cars can each be given 4 new tyres?
- 5 There are five sweets in each bag. How many bags can be made from 48 sweets?
- 6 A teacher hears six children read every day. How many days will it take her to hear the 28 children in her class?

- 8
- 1 How many 3 m lengths can be cut from 50 m of rope?
- 2 Four tennis balls can fit into one can. How many cans are needed for 42 balls?
- Tommy has 100 matchsticks. How many hexagons can he make?
- 4 Each pack holds eight tomatoes. How many packs can be made from 46 tomatoes?
- 5 Verity saves 10p coins. How many will she need to collect before she has saved £1.25?
- 6 A baker makes 75 muffins. They are sold in boxes of twelve. How many boxes can be made up?

- C
- 1 How many complete weeks are there in 125 days?
- 2 There are 110 guests at a wedding. They will sit at tables of eight. How many tables will be needed?

- 3 Theatre tickets cost £19 each. How many tickets can be bought with £100?
- 4 A ribbon is two metres long. How many 12 cm lengths can be cut from the ribbon?
- 5 Each crate holds 20 bottles. How many crates are needed for 450 bottles?
- 6 Glasses hold 150 ml. How many glasses will be needed to take four litres of juice?

TARGET To interpret remainders appropriately for the context.

Examples

Each tray holds 9 plants. How many trays are needed for 150 plants? $150 \div 9 = 16 \text{ r } 6 \text{ (Round up.)}$

Answer 17 trays are needed.

Raffle tickets costs 20p each. How many can be bought with £2·30? $230 \div 20 = 11 \text{ r } 10 \text{ (Round down.)}$ Answer 11 tickets can be bought.

- 1 There are three cakes on each plate. How many plates are needed for 44 cakes?
- Egg boxes hold six eggs. How many boxes can be made up from 40 eggs?
- 3 Each can of paint holds 4 litres. How many cans can be filled from 30 litres?
- 4 Shane can carry 20 bricks in each barrow load. How many journeys will he need to make to carry 250 bricks?
- Setsy has £50 notes only. How many will she need to pay £280?
- 6 Footballs cost £8 each. How many can a school buy with £70?
- Peach box holds 12 pencils. How many boxes are needed for the 30 children in a class to have a pencil each?

- 8
- How many complete weeks are there in 60 days?
- 2 Bottles are put into crates of twelve.
 How many crates are needed for 100 bottles?
- 3 One bag of dog food lasts Rex for six days.
 How many bags will he need for 75 days?
- 4 Cards are sold in packets of eight. How many packets can be made from 150 cards?
- 5 Bags of sand hold 25 kg. Robin needs 340 kg. How many bags does he need to buy?
- 6 Apples are sold in bags of nine. How many bags can be filled from 140 apples?
- 7 There are four tennis balls in each can. How many cans are needed for 75 balls?

- C
- 1 Patio tiles are 60 cm long. How many are needed to make a row 10 m long?
- 2 Pencil crayons cost 29p each. How many can Sadiq buy for £5.
- 3 There are 220 people attending a conference. They will sit at tables of six. How many tables will be needed?
- 4 A bus journey takes 45 minutes. How many complete journeys can the bus make in 16 hours?
- A bag of fertilizer holds 75 litres. How many bags can be filled from 1000 litres?
- 6 A hotel has 500 g of salt. Saltpots hold 30 g. How many saltpots will be needed to take all the salt?

To express a remainder as a fraction and as a decimal. **TARGET**

Examples

REMAINDERS AS FRACTIONS

$$57 \div 4 = 14\frac{1}{4}$$
$$138 \div 5 = 27\frac{3}{5}$$

REMAINDERS AS DECIMALS

$$57 \div 4 = 14.25$$

 $138 \div 5 = 27.6$

MONEY £57 \div 4 = £14.25 £138 \div 5 = £27.60

Give the remainder as a fraction.

Copy and complete.

- $24.8 \div = 0.06$
- 3 1.4 = 0.55
- $45 \times \boxed{} = 14$
- 5 + 11 = 1.1
- 6 + 1.65 = 5
- $7 \times 50 = 24$
- 8 1.48 = 3.8
- 9 A football team plays 42 matches. They lose one third of their games. They win three quarters of the rest. How many do they draw?
- In one day 72 guests arrive at an hotel and 27 leave. There are now 219 people staying there. How many people were staying at the hotel at the start of the day?
- One shampoo sachet holds 30 ml. How many sachets can be made from the shampoo in four containers each holding 1.5 litres?
- Serena buys three sandwiches for £2.25 each and three drinks for 85p each. She pays with a £20 note. How much change does she receive?

TARGET To solve 1- and 2-step word problems involving all four operations.

Example

In one hour 1258 vehicles are counted travelling west and half as many travelling east.

How many vehicles are counted altogether?

 $1258 \div 2 = 629$ 1258 + 629 = 1887Answer 1887 vehicles

A

- 1 There are 54 books in Cora's bookcase and 37 on her shelf. How many books does she have altogether?
- 2 There are 85 children in Year 5. 39 are girls. How many are boys?
- 3 There are six fish fillets in each pack. How many packs can be made from 48 fillets?
- 4 Lorna collects three boxes of pills from the chemist. There are 40 pills in each box. Each pill weighs 2 g. What is the total weight of the pills in the three boxes?
- 5 Carly has 84 smarties. She eats 18 and shares the rest with a friend. How many smarties does Carly's friend have?

6 Sweets cost 9p. Luke buys five. How much change does he get if he pays one pound?

- 믕
- 1 There are 48 stamps on each sheet. How many stamps are there on 12 sheets?
- 2 The afternoon performance of a play is watched by 217 people. 146 more people watch the evening performance. How many people watch the two performances altogether?
- 3 Floyd buys a sofa and an armchair for £918 altogether. The sofa costs £669. What does the armchair cost?
- 4 Two parcels have a combined weight of 4.6 kg. The larger parcel weighs 0.8 kg more than the smaller one. What is the weight of each parcel?
- Isabel buys five apples and one pear. Apples cost 25p. She pays £2 and receives 45p change. What does the pear cost?

- C
- 1 School Concert programmes cost 25p. 147 are sold. How much money has been raised by programme sales?
- 2 One can of beans holds 400 g. How many can be filled from 60 kg?
- 3 There is 750 ml of juice in each bottle of orange. There are 24 bottles in each crate. How much juice is there in eight full crates?
- 4 A motor bike costs £4999. In a sale its price is reduced by one tenth. What is the new price?
- In an election the winning candidate received 12 369 votes. The only other candidate received 3517 fewer votes. How many people voted?
- 6 A school orders 240 new pencils. Two fifths are given out. How many are left in stock?

TARGET To solve 2-step word problems involving all four operations.

Example

An athlete buys a stopwatch for £29.50 and a pair of running shoes. He pays £100 and receives £4.51 change. How much do the shoes cost?

£100 - £4.51 = £95.49£95.49 - £29.50 = £65.99

Answer The shoes cost £65.99.

A

- 1 There are 83 children on a playground.
 46 go in for lunch.
 29 come out from lessons. How many children are on the playground now?
- 2 A quarter of the 24 chocolates in a box have been eaten. The rest are shared equally by three friends. How many do they have each?
- 3 There are eight more people on the upper deck of a boat than on the lower deck. There are 27 people on the lower deck. How many people are on the boat altogether?
- 4 How many seconds are there in five hours?
- 5 Daniel's book has 110 pages. He reads half the book. He then reads another 18 pages. How many pages has he read?

8

- 1 Amber's washing machine costs £450. She pays one fifth as a deposit. How much does she have left to pay?
- 2 A farm shop sells four boxes of 12 eggs and nine boxes of 6 eggs. How many eggs are sold altogether?
- 3 A total of 1872 people live in a village. 539 are men. 617 are women. How many children live in the village?
- 4 Cheese costs £6.00 per kilogram. Victor buys 300 g. How much does he pay?
- On Friday 108 people attend the Casualty Department of a hospital. On Saturday the number of patients increases by one third. How many people attend the Casualty Department on both days altogether?

C

- 1 There are 84 children in Year 5. One twelfth are absent. 28 are on a school trip. How many Year 5 children are in school?
- 2 Each carton of juice holds 750 ml. There are 24 cartons in each box. How much juice is there in five boxes?
- 3 Warren buys a bike. He pays one quarter of the price as a deposit. He still has £78 to pay. How much does the bike cost?

- 4 A cable is 180 m long. 45 m is used. Seven ninths of the remaining cable is used. How much cable is left?
- 5 Mervin and Jonah both earn £640. Mervin saves £150. Jonah saves three eighths of his earnings. How much more does Jonah save?

TARGET To solve number problems involving all four operations.

Example

Find two consecutive numbers:

with a total of 151

with a product of 380.

Answer *75 and 76* Answer *19 and 20*

Find the pair of numbers.

- a sum of 36 a difference of 2
- a sum of 80 a difference of 10
- a sum of 17 a product of 60
- a sum of 22 a product of 96

Find three consecutive numbers with a total of:

5 18

7 51

6 30

8 87.

Find two consecutive numbers with a product of:

20

1 90

10 42

132.

- I think of a number.
 I add 25.
 I take 7.
 The answer is 43.
 What is my number?
- I think of a number.
 I multiply by 4.
 I add 18.
 The answer is 66.
 What is my number?

B

Find the number.

- 1 a square number the product of its digits is 24
- 2 a 2-digit numbera prime numberthe sum of its digits is 14
- a 2-digit number a prime number the product of its digits is 12
- 4 a 2-digit number a square number the sum of its digits is 13
- 5 a 2-digit number a prime number a factor of 152
- 6 a 3-digit number a multiple of 8 the sum of its digits is 4

Copy and complete.

 $9 \times 10 + 30 = 100$

 $00 36 \div -9 = 3$

 $11 \div 2 + 14 = 38$

C

Find a pair of square numbers with:

- 10 a sum of 193
- 2 a product of 900
- 3 a difference of 27
- a product of 6400.

Find a pair of prime numbers with:

- **5** a sum of 12
- 6 a product of 143
- 2 a sum of 31
- 8 a product of 62.

Find two consecutive numbers with a product of:

- **9** 210
- **1** 702
- **10** 342
- **1** 930.

Find three consecutive numbers with a product of:

- **B** 60
- 15 720
- **1** 210
- **16** 2730.
- Find the first five 3-digit prime numbers.

To identify, name and write equivalent fractions of a given **TARGET** fraction.

Examples

You can change a fraction into an equivalent fraction by multiplying or dividing (cancelling).

$$\frac{1}{4} (\times 3) = \frac{3}{12}$$

$$\frac{8}{10} \frac{(\div 2)}{(\div 2)} = \frac{4}{5}$$

Write the equivalent fractions shown in each pair of diagrams.

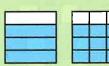

B

Copy and complete.

$$\frac{1}{2} = \frac{1}{6}$$

$$\frac{1}{2} = \frac{1}{6}$$
 $\frac{2}{6} = \frac{4}{6}$

$$\frac{3}{4} = \frac{12}{12}$$

$$\frac{1}{3} = \frac{2}{1}$$

$$\frac{1}{3} = \frac{1}{9}$$

$$\frac{1}{2} = \frac{50}{\boxed{}}$$

$$\frac{3}{10} = \frac{1}{100} \quad \frac{3}{4} = \frac{6}{100}$$

$$\frac{3}{4} = \frac{6}{1}$$

$$\frac{3}{6} = \frac{12}{12}$$

5
$$\frac{3}{6} = \frac{1}{12}$$
 13 $\frac{4}{5} = \frac{8}{12}$

$$\frac{1}{4} = \frac{1}{8}$$

$$\frac{2}{3} = \frac{6}{1}$$

$$\frac{1}{5} = \frac{1}{10}$$
 $\frac{1}{4} = \frac{3}{10}$

$$\frac{1}{4} = \frac{3}{1}$$

$$\frac{5}{6} = \frac{10}{6}$$

Write the odd one out in each set of fractions.

$$0 \frac{4}{12} \frac{3}{8} \frac{2}{6} \frac{3}{9}$$

$$\frac{5}{10} \frac{6}{12} \frac{2}{5} \frac{3}{6}$$

$$\frac{8}{12}$$
 $\frac{75}{100}$ $\frac{9}{12}$ $\frac{6}{8}$

Copy and complete.

$$\frac{5}{8} = \frac{1}{16}$$

$$\frac{3}{4} = \frac{20}{20}$$

$$\frac{2}{7} = \frac{14}{14}$$

3
$$\frac{1}{3} = \frac{1}{9}$$
 1 $\frac{1}{2} = \frac{50}{14}$ 3 $\frac{2}{7} = \frac{1}{14}$ 1 $\frac{12}{20} = \frac{1}{5}$

$$\frac{7}{10} = \frac{1}{100}$$
 $\frac{8}{16} = \frac{1}{2}$

$$\frac{4}{9} = \frac{8}{1}$$

$$\frac{3}{5} = \frac{30}{1}$$

$$\frac{4}{5} = \frac{80}{1}$$

Write the odd one out in each set of fractions.

$$18 \ \frac{80}{100} \ \frac{20}{24} \ \frac{12}{15} \ \frac{16}{20}$$

$$\bigcirc \frac{6}{60} \quad \frac{3}{18} \quad \frac{2}{12} \quad \frac{5}{30}$$

TARGET To compare fractions with different denominators.

To compare two fractions with different denominators convert one or both so that they have the same denominator.

Examples

Which is larger, $\frac{1}{2}$ or $\frac{3}{8}$?

$$\frac{1}{2} = \frac{4}{8}$$

 $\frac{1}{2}$ is larger than $\frac{3}{8}$.

Which is larger, $\frac{1}{2}$ or $\frac{3}{5}$?

$$\frac{1}{2} = \frac{5}{10}$$
 $\frac{3}{5} = \frac{6}{10}$

 $\frac{3}{5}$ is larger than $\frac{1}{2}$.

A

Which of the fractions in the box are:

- a) equal to one half
- b) less than one half
- c) greater than one half?

Which fraction is larger?

- $2 \frac{1}{3}$ or $\frac{1}{4}$
- $\frac{1}{8}$ or $\frac{1}{2}$
- $\frac{3}{10}$ or $\frac{4}{10}$
- $\frac{1}{6}$ or $\frac{1}{7}$
- $\frac{6}{11}$ or $\frac{4}{11}$
- $\sqrt{2} \frac{2}{9} \text{ or } \frac{2}{3}$
- $\frac{3}{4}$ or $\frac{3}{5}$

Write each group of fractions in order of size, smallest first.

- $9\frac{1}{5}\frac{1}{8}\frac{1}{3}$
- $00\frac{4}{5}\frac{4}{11}\frac{4}{7}$
- $0 \frac{1}{6} \frac{1}{4} \frac{1}{10}$

B

For each of the following pairs of numbers:

- a) list the first 12 multiples of each number
- b) write down the common multiples
- c) write down the lowest common multiple.
- 1 2 and 5
- 2 3 and 4
- 3 5 and 3
- 4 and 7

Copy and complete to find the larger fraction.

- - is larger.
- 6 $\frac{3}{5}$ or $\frac{7}{10} \to \frac{7}{10}$ or $\frac{7}{10}$
 - is larger.
- $7 \quad \frac{5}{6} \text{ or } \frac{2}{3} \rightarrow \frac{5}{6} \text{ or } \frac{\boxed{}}{6}$
 - is larger.
- - is larger.
- $9 \quad \frac{2}{3} \text{ or } \frac{3}{4} \rightarrow \frac{1}{12} \text{ or } \frac{1}{12}$
 - is larger.

C

Copy and complete to find the larger fraction.

- 2 $\frac{3}{4}$ or $\frac{5}{6} \rightarrow \frac{1}{12}$ or $\frac{1}{12}$ is larger.
- 3 $\frac{4}{10}$ or $\frac{5}{12} \rightarrow \frac{2}{60}$ or $\frac{2}{60}$ is larger.
- $\begin{array}{c}
 4 \quad \frac{5}{8} \text{ or } \frac{7}{12} \rightarrow \frac{2}{48} \text{ or } \frac{2}{48} \\
 \text{is larger.}
 \end{array}$

- $\boxed{2} \frac{1}{3} \text{ or } \frac{2}{5} \rightarrow \boxed{} \text{ or } \boxed{}$

To compare and order fractions with different denominators. TARGET

To order fractions with different denominators convert one or more so that they have the same denominator.

Example

Write in order smallest first, $\frac{1}{2}$, $\frac{3}{10}$, $\frac{2}{5}$.

 $\frac{1}{2} = \frac{5}{10}$ $\frac{2}{5} = \frac{4}{10}$ Answer $\frac{3}{10}$, $\frac{2}{5}$, $\frac{1}{2}$

Which fraction is larger?

- $2\frac{2}{3}$ or $\frac{2}{7}$ $6\frac{3}{8}$ or $\frac{3}{11}$
- $\frac{8}{10}$ or $\frac{7}{10}$ $\sqrt{\frac{5}{7}}$ or $\frac{6}{7}$
- $\frac{4}{12}$ or $\frac{5}{9}$ $\frac{6}{11}$ or $\frac{6}{12}$

Copy and complete to find the larger fraction.

- 9 $\frac{1}{2}$ or $\frac{5}{12} \to \frac{5}{12}$ or $\frac{5}{12}$
 - is larger.
- $\frac{4}{5}$ or $\frac{9}{10} \to \frac{9}{10}$ or $\frac{9}{10}$
 - is larger.
- - is larger.
- $\frac{1}{2}$ or $\frac{4}{10} \to \frac{4}{10}$ or $\frac{4}{10}$
 - is larger.
- $\frac{1}{3}$ or $\frac{1}{6} \rightarrow \frac{1}{6}$ or $\frac{1}{6}$
 - is larger.
- $\frac{2}{3}$ or $\frac{7}{9} \rightarrow \frac{1}{9}$ or $\frac{7}{9}$
 - is larger.

B

To find the larger fraction convert one of each pair so that they share a common denominator.

- 1 $\frac{5}{6}$ or $\frac{11}{12}$ 4 $\frac{2}{5}$ or $\frac{3}{10}$
- $\frac{1}{3}$ or $\frac{3}{12}$ $\frac{1}{2}$ or $\frac{5}{8}$
- $\frac{5}{10}$ or $\frac{51}{100}$ $\frac{3}{4}$ or $\frac{8}{12}$

To find the larger fraction convert both fractions so that they share a common denominator.

- $7 \frac{2}{3} \text{ or } \frac{4}{5}$ $0 \frac{4}{6} \text{ or } \frac{5}{9}$
- 8 $\frac{1}{4}$ or $\frac{2}{6}$ 1 $\frac{1}{2}$ or $\frac{4}{7}$
- $9 \frac{3}{5} \text{ or } \frac{7}{12}$ $2 \frac{3}{8} \text{ or } \frac{5}{12}$

Write these fractions in order, smallest first.

- $\frac{1}{2}, \frac{3}{8}, \frac{1}{4}, \frac{1}{8}$
- $\frac{14}{3}$, $\frac{2}{6}$, $\frac{1}{3}$, $\frac{1}{2}$
- $\frac{2}{5}, \frac{3}{5}, \frac{1}{2}, \frac{3}{10}$
- $\frac{3}{4}, \frac{3}{8}, \frac{7}{12}, \frac{1}{2}$
- $\frac{5}{6}, \frac{1}{2}, \frac{2}{3}, \frac{5}{12}$
- $\frac{3}{4}, \frac{4}{5}, \frac{1}{2}, \frac{6}{10}$

C

Write the larger fraction.

- $2\frac{4}{5}, \frac{9}{11}$ $6\frac{4}{9}, \frac{5}{12}$
- 3 $\frac{1}{4}$, $\frac{2}{9}$ 7 $\frac{2}{3}$, $\frac{5}{8}$
- $\frac{4}{7}, \frac{7}{12}$ $\frac{5}{7}, \frac{7}{9}$

Write in ascending order.

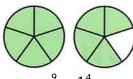

- $9\frac{5}{6}, \frac{2}{3}, \frac{7}{9}, \frac{7}{12}$
- $\frac{3}{5}$, $\frac{1}{2}$, $\frac{7}{10}$, $\frac{55}{100}$
- $\frac{1}{2}$, $\frac{5}{8}$, $\frac{7}{16}$, $\frac{3}{4}$
- 12 3 8 5 4 5

Find the fraction which is halfway between each pair of numbers.

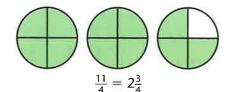

- \bigcirc $\frac{1}{2}$ and $\frac{3}{4}$
- $\frac{1}{5}$ and $\frac{2}{5}$
- $\frac{1}{6}$ and $\frac{1}{3}$
- $\frac{16}{8}$ and $\frac{3}{4}$
- $\sqrt{\frac{7}{12}}$ and $\frac{2}{3}$
- $\frac{1}{3}$ and $\frac{5}{8}$
- $\frac{19}{5}$ and $\frac{9}{10}$
- $\frac{1}{3}$ and $\frac{1}{2}$

TARGET To recognise an improper fraction and write as a mixed number.

Examples

$$\frac{9}{5} = 1\frac{4}{5}$$

21 tenths =
$$2\frac{1}{10}$$

$$\frac{21}{10} = 2\frac{1}{10}$$

A

Use the diagram to help complete the fraction.

$$1 = \frac{1}{5}$$

Copy and complete.

- 6 1 = eighths
- 0 1 = quarters
- 8 1 = ninths

Write the next four terms in each sequence using mixed numbers.

- $90, \frac{1}{4}, \frac{2}{4}, \frac{3}{4}, 1, 1\frac{1}{4}$
- $0, \frac{1}{2}, 1, 1\frac{1}{2}, 2, 2\frac{1}{2}$
- $0, \frac{1}{3}, \frac{2}{3}, 1, 1\frac{1}{3}, 1\frac{2}{3}$
- $0, \frac{1}{8}, \frac{2}{8}, \frac{3}{8}, \frac{4}{8}, \frac{5}{8}$

00

Write the shaded area as:

- a) an improper fraction
- b) a mixed number.

- 2 8 8
- $\bullet \oplus \oplus \oplus \oplus$
- **⑤ ⊗ ⊗**
- **⊘ ⊕ ⊕**
- **3** ⊗ ⊗ ⊗ ⊗ ⊗

Write as an improper fraction and complete the mixed number.

- 9 7 quarters = 1
- 0 5 halves = $\frac{1}{2}$
- 17 tenths = 1
- 12 8 fifths = $\frac{3}{5}$
- 13 7 thirds =
- 15 eighths =
- 10 sixths =
- 16 9 quarters =

C

Change to mixed numbers.

- $0^{\frac{7}{2}}$
- $\frac{5}{4}$
- $\frac{21}{5}$
- $\frac{55}{6}$
- $\frac{3}{10}$
- $\sqrt{\frac{346}{100}}$
- $\frac{13}{8}$
- 8 53 12

Copy and complete.

- $2\frac{19}{100} =$ hundredths
- $4\frac{5}{6} =$ sixths
- $3\frac{4}{9} =$ ninths
- $7\frac{3}{8} =$ eighths

Write the next four terms in each sequence using mixed numbers.

- $\frac{1}{7}, \frac{3}{7}, \frac{5}{7}, \frac{1}{7}$
- $\frac{1}{6}$, $\frac{2}{6}$, $\frac{3}{6}$, $\frac{4}{6}$
- $\frac{1}{9}, \frac{3}{9}, \frac{5}{9}, \frac{7}{9}$

To change an improper fraction to a mixed number and vice versa. **TARGET**

Examples

Change $\frac{20}{3}$ to a mixed number.

$$\frac{20}{3} = 20 \div 3$$

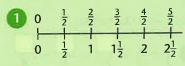

$$= 6 \text{ remainder } 2$$

$$= 6\frac{2}{3}$$

Change $3\frac{2}{5}$ to an improper fraction.

$$3\frac{2}{5} = 3 + \frac{2}{5}$$
$$= \frac{15}{5} + \frac{2}{5}$$
$$= \frac{17}{5}$$

Write the next five pairs of numbers in each number line.

Use your number lines to write these improper fractions as mixed numbers.

$$\frac{7}{2}$$

$$9 \frac{9}{3}$$

$$\frac{6}{3}$$

$$\frac{7}{3}$$

Use your number lines to write these mixed numbers as improper fractions.

$$\bigcirc 2\frac{1}{2}$$

$$\sqrt{2}$$
 5\frac{1}{2}

$$\frac{1}{3}$$
 $\frac{1}{3}$ $\frac{2}{3}$

$$\frac{13}{4}$$

13

Copy and complete.

$$\frac{1}{5} = 1$$

$$\frac{13}{4} = \frac{1}{4}$$

$$7\frac{1}{2} =$$

4
$$3\frac{2}{3} =$$

Change to mixed numbers.

$$\frac{17}{2}$$

$$\frac{23}{5}$$

$$\frac{17}{6}$$

$$\frac{11}{8}$$

$$\sqrt[3]{\frac{21}{4}}$$

$$\frac{16}{3}$$

$$\frac{12}{10}$$

Change to improper fractions.

$$\bigcirc 4\frac{3}{4}$$

$$\frac{1}{4}$$
 $2\frac{5}{7}$

$$\frac{18}{18} 2\frac{4}{5}$$

$$6\frac{2}{3}$$

$$\frac{3}{10}$$

$$2\frac{7}{8}$$

Write as both mixed numbers and improper fractions.

C

Change to mixed numbers.

$$0^{\frac{24}{5}}$$

$$9 \frac{89}{20}$$

$$\frac{2}{3}$$

$$\frac{648}{100}$$

$$\frac{49}{10}$$

$$\frac{43}{12}$$

$$\frac{27}{8}$$

$$\frac{29}{4}$$

$$\frac{41}{7}$$

$$\frac{96}{15}$$

$$8 \frac{41}{9}$$

$$\frac{167}{50}$$

Change to improper fractions.

$$\bigcirc 6\frac{3}{4}$$

$$18 \ 8\frac{1}{10}$$

$$26 \ 5\frac{6}{100}$$

$$\frac{19}{9}$$
 3 $\frac{7}{9}$

$$27 \ 3\frac{18}{30}$$

$$20 7\frac{3}{5}$$

$$\frac{28}{18}$$
 3 $\frac{7}{18}$

$$21 5\frac{7}{8}$$

$$29 \ 2\frac{7}{24}$$

$$22 8\frac{5}{6}$$

$$30 \ 5\frac{39}{50}$$

$$\frac{23}{3}$$
 9 $\frac{2}{3}$

$$4\frac{2}{13}$$

$$4\frac{4}{7}$$

$$\frac{32}{21}$$

TARGET To add and subtract fractions with the same denominator and multiples of the same number.

SAME DENOMINATOR

Add or subtract the numerators.

Put the answer over the same denominator.

Examples

$$\frac{5}{12} + \frac{2}{12} = \frac{7}{12}$$

$$\frac{7}{9} - \frac{4}{9} = \frac{3}{9}$$

DIFFERENT DENOMINATORS

Convert one of the fractions to an equivalent fraction with the same denominator as the other fraction.

Examples

$$\frac{5}{8} + \frac{1}{4} = \frac{5}{8} + \frac{2}{8} = \frac{7}{8}$$

$$\frac{11}{12} - \frac{1}{3} = \frac{11}{12} - \frac{4}{12} = \frac{7}{12}$$

Work out

$$\frac{3}{6} + \frac{1}{6}$$

$$\frac{2}{5} + \frac{2}{5}$$

$$2\frac{2}{5} + \frac{2}{5}$$
 $14\frac{4}{6} - \frac{2}{6}$

$$\frac{2}{4} + \frac{1}{4}$$

$$\frac{2}{4} + \frac{1}{4}$$
 $\frac{6}{8} - \frac{1}{8}$

$$\frac{4}{7} + \frac{2}{7}$$

$$\frac{4}{7} + \frac{2}{7}$$
 $\frac{5}{5} - \frac{2}{5}$

$$\boxed{5} \ \frac{2}{12} + \frac{9}{12} \ \boxed{0} \ \frac{3}{4} - \frac{1}{4}$$

$$\frac{8}{9} - \frac{5}{9}$$

$$\sqrt{\frac{4}{10} + \frac{4}{10}}$$

$$\sqrt{\frac{4}{10} + \frac{4}{10}}$$
 $\sqrt{\frac{10}{12} - \frac{3}{12}}$

$$\frac{20}{3} - \frac{1}{3}$$

9
$$\frac{5}{9} + \frac{2}{9}$$
 21 $\frac{5}{7} - \frac{3}{7}$

$$\frac{5}{7} - \frac{3}{7}$$

$$\frac{3}{11} + \frac{6}{11}$$

$$\frac{3}{11} + \frac{6}{11}$$
 22 $\frac{9}{10} - \frac{4}{10}$

$$\frac{1}{8} + \frac{5}{8}$$

$$1 \frac{1}{8} + \frac{5}{8} \qquad 23 \quad \frac{8}{12} - \frac{6}{12}$$

$$\frac{5}{12} + \frac{4}{12}$$
 $\frac{5}{6} - \frac{4}{6}$

$$\frac{5}{6} - \frac{4}{6}$$

8

Copy and complete.

$$1 \frac{2}{3} + \frac{1}{9} = \frac{1}{9} + \frac{1}{9} = \frac{1}{9}$$

$$\frac{1}{2} - \frac{2}{6} = \frac{1}{6} + \frac{2}{6} = \frac{1}{6}$$

$$\frac{3}{8} + \frac{1}{4} = \frac{3}{8} + \square = \square$$

$$\frac{4}{12} + \frac{1}{6} = \frac{7}{12} + \frac{1}{12} = \frac{1}{12}$$

TARGET To solve word problems involving finding fractions of numbers and quantities.

Example

The Hadrian's Wall Path is 84 miles long. Esme has walked five twelfths of its length. How much further does she have to walk to complete the whole Path? $84 \div 12 = 7$

 $7 \times 5 = 35$

84 - 35 = 49

Answer 49 miles

A

- 1 There are 24 footballs. One third need pumping up. How many are ready to use?
- 2 A television programme lasts for one hour. One fifth of the time is adverts. How long is the programme itself?
- 3 There are 120 tissues in a box. One sixth are used. How many are left?
- 4 There are 36 cars in a car park. A quarter of the cars are white. How many are not white?
- A bicycle costs £70. In a sale the price is cut by one tenth. What is the new price?
- 6 A piece of wood is 60 cm long. One third is cut off. How long are the two pieces?

- B
- 1 Red and yellow paint is mixed to make one litre of orange paint. Four fifths of the paint is yellow. How much is red?
- 2 There are sixty pupils in Year 4. Three tenths live more than one mile from school. How many live nearer to the school?
- 3 A packet of muesli weighs 350 g. Four sevenths of the mixture is oat flakes. What is the weight of the other ingredients?
- 4 There are 72 stalls at a market. Three eighths sell food. How many do not sell food?
- 5 There are 27 children in a class. Seven ninths belong to sports clubs. How many do not belong to a sports club?
- 6 A cake weighs 300 g. Three quarters is eaten. How much is left?

- C
- 1 A shop sells 144 bottles of milk. Four ninths are full fat milk. How many are skimmed or semiskimmed?
- 2 Chloe has 161 books. Three sevenths of the books are on her top shelf. How many does she keep on her other shelf?
- 3 There are 240 tea bags in a packet. Nine twentieths are used. How many are left?
- 4 A holiday costs £2000. Duncan has saved five eighths of the money. How much more does he need?
- 5 A roll of wrapping paper is six metres long. Seven twelfths has been used. How much is left?
- 6 What is one fifth of one quarter of one kilogram?

whole numbers. To connect multiplication by a fraction to finding fractions of **TARGET**

 $8 \times (2 \div 0\xi) = 0\xi \, \log \frac{8}{\xi}$ $84 = \frac{8}{6} = \frac{8}{6} = \frac{8}{6}$ What number is $1\frac{3}{5}$ times larger than 30?

TARGET

To recognise and use thousandths and relate them to tenths, hundredths and decimal equivalents.

Examples

$$\frac{64}{100} = 0.64$$

$$\frac{427}{1000} = 0.427$$

$$0.427 = \frac{4}{10} + \frac{2}{100} + \frac{7}{1000}$$

$$0.427 = 0.4 + 0.02 + 0.007$$

The value of a digit depends upon its position in a number.

Each digit in a number is 10 times greater than the digit to the right. This applies to decimal fractions as well as to whole numbers.

$$T \quad U \cdot \frac{1}{10} \quad \frac{1}{100} \quad \frac{1}{1000}$$

$$30 = 3 \quad 0 \cdot 0$$

$$3 = 3 \cdot 0$$

$$\frac{3}{10} = 0 \cdot 3$$

$$\frac{3}{100} = 0 \cdot 0 \quad 3$$

$$\frac{3}{1000} = 0 \cdot 0 \quad 0 \quad 3$$

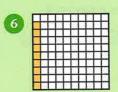

A

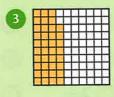

Express the shaded part of each shape as a fraction and as a decimal fraction.

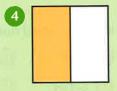

Give the value of the underlined figure in each of these numbers.

- 1.6<u>3</u>

- **1**3⋅57
- <u>6</u> 5.<u>9</u>28
- **20** 7.05<u>6</u>

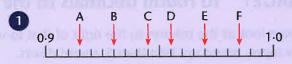

Write each number shown by the arrows as a decimal fraction.

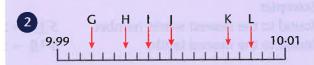

C

Write each number shown by the arrows as a decimal fraction.

Increase the following numbers by:

1	1 1
0	100

1000

- 3 1.98
- 7 4.2
- **1** 3

- 4 5
- 8 0.39
- **1**2 2.46

- **5** 2.436
- 9 8
- **B** 9.999

- 6 7.9
- 6.095
- 1.7

Copy and complete.

$$13 \quad 2 + \frac{3}{10} + \frac{7}{100} + \frac{5}{1000} = \boxed{}$$

$$16 \ 4 + \boxed{} + \frac{1}{1000} = 4.801$$

$$\boxed{10} \frac{4}{10} + \frac{2}{100} + \boxed{} = 0.429$$

$$1 + \boxed{ + \frac{3}{1000}} = 1.063$$

Copy and complete.

$$26 \ 0.792 + \boxed{} = 0.8$$

$$28 6.005 + \boxed{} = 6.275$$

TARGET To round decimals to the nearest whole number or tenth.

Always look at the column to the right of that to which you are rounding. 5 or more, round up. Less than 5, round down.

Examples

Round to the nearest whole number.

 $5\cdot\underline{1}8 \rightarrow 5$

 $7{\cdot}\underline{5}3 \to 8$

Round to the nearest tenth.

 $5.18 \to 5.2$

 $7{\cdot}53 \rightarrow 7{\cdot}5$

Round to the nearest whole number.

27 6⋅35 ÷ 4

28 $7.825 \div 6$

TARGET To compare numbers with up to three decimal places.

Compare the highest value digits first and then the next highest, and so on.

Example

Which number is larger, 0.6 = 0.60.613 or 0.631? 0.01 < 0.03

Answer 0.631 is larger.

Add zeros to give each number the same number of decimal places.

Example

Which number is larger, 0.270 0.27 or 0.072? 0.072

Answer 0.27 is larger.

An we see a paragraph and upon	
Copy and complete by writing $<$ or $>$ in the box.	What number lies halfway between:

TARGET To order numbers with up to three decimal places.

Example

f			
Arrange these numbers	Write in columns	Put in zeros	Arrange in order
in ascending order.	2.32	2.320	3
2.32, 2, 2.232, 2.3	2	2.000	2, 2.232, 2.3, 2.32
2.32, 2, 2.232, 2.3	2.232	2.232	
	2.3	2.300	

Give the next five numbers in each sequence.

- 0.01, 0.02, 0.03, 0.04, 0.05
- 2 0.93, 0.94, 0.95, 0.96, 0.97
- 3 0.02, 0.04, 0.06, 0.08, 0.1
- 4 0.05, 0.1, 0.15, 0.2, 0.25
- 5 1.12, 1.1, 1.08, 1.06, 1.04

Arrange these decimals in order, smallest first.

- 6 1.53, 3.15, 1.33, 1.35
- **7** 5.61, 6.51, 15.6, 5.16
- 8 2.78, 0.78, 2.07, 0.87
- 7.23, 7.33, 7.22, 7.32
- 10 6.49, 4.96, 6.94, 4.69

B

Arrange these decimals in ascending order.

- 1 3.85, 3.58, 0.853, 5.38
- 2 4.29, 4.229, 2.94, 2.492
- 3 1.667, 6.17, 1.676, 1.67
- 4 3.46, 3.446, 4.343, 4.334

Give the next five terms in each sequence.

- **⑤** 0.993, 0.994, 0.995, 0.996, 0.997
- 6 0.8, 0.75, 0.7, 0.65, 0.6
- 1.111, 1.113, 1.115, 1.117, 1.119
- **8** 0.465, 0.47, 0.475, 0.48, 0.485
- Oopy the line and locate the numbers.

0.95	0.975	0.935
0.985	0.92	0.96

0.9

C

Arrange these decimals in ascending order.

- 1 3.37, 3.77, 3.337, 3.377, 3.737
- 2 6.446, 6.66, 6.44, 6.664, 6.4
- 3 2.55, 2.225, 2.522, 2.25, 2.525
- 4 9.989, 9.898, 9.888, 9.99, 9.89

Give the next five terms in each sequence.

- **⑤** 0.986, 0.988, 0.99, 0.992, 0.994
- 6 0.407, 0.406, 0.405, 0.404, 0.403
- 7 1.965, 1.97, 1.975, 1.98, 1.985
- 8 3.019, 3.016, 3.013, 3.01, 3.007
- 9 Copy the line and locate the numbers.

2.005	1.996	2.008
1.993	2.001	1.999

TARGET To practise adding and subtracting decimals mentally.

It can help to imagine missing zeros.

9.46 - = 8.9

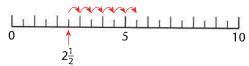

22 - 0.92 = 1.845

23 8·135 – = 7·53

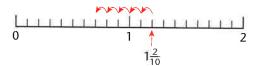

24 - 0.625 = 3

TARGET To count using fractions.

Examples

Count on six steps of one half from $2\frac{1}{2}$. Answer $2\frac{1}{2}$, 3, $3\frac{1}{2}$, 4, $4\frac{1}{2}$, 5, $5\frac{1}{2}$

Count back five steps of one tenth from $1\frac{2}{10}$. Answer $1\frac{2}{10}$, $1\frac{1}{10}$, 1, $\frac{9}{10}$, $\frac{8}{10}$, $\frac{7}{10}$

A

Give the first six numbers.

- Count on in tenths from 0.
- 2 Count on in twelfths from $\frac{4}{12}$.
- 3 Count on in halves from $5\frac{1}{2}$.
- 4 Count on in eighths from $\frac{2}{8}$.
- Sount on in quarters from $2\frac{1}{4}$.
- 6 Count on in sixths from 0.

Count back to 0:

- in thirds from 2
- 8 in fifths from 1
- in halves from 4
- $\frac{7}{10}$ in tenths from $\frac{7}{10}$
- in sevenths from 1
- \bigcirc in quarters from $1\frac{1}{2}$.

B

Give the first six numbers.

- 1 Count on in steps of $\frac{1}{6}$ from $\frac{3}{6}$.
- 2 Count on in steps of $\frac{1}{10}$ from $\frac{5}{10}$.
- 3 Count on in steps of $\frac{1}{12}$ from $\frac{8}{12}$.
- 4 Count on in steps of $\frac{2}{9}$ from 0.
- **6** Count on in steps of $\frac{2}{5}$ from 0.
- 6 Count on in steps of $\frac{3}{4}$ from 0.

Count back six steps:

- of one eighth from $1\frac{4}{8}$
- 8 of two thirds from 4
- 9 of one fifth from 2
- 0 of one half from $3\frac{3}{4}$
- 0 of two tenths from $1\frac{6}{10}$
- of three twelfths from $1\frac{9}{12}$.

C

Copy and complete each sequence.

- $3\frac{5}{7}$ $1\frac{2}{7}$ $2\frac{1}{7}$ $2\frac{1}{7}$
- $5 \qquad \qquad 2\frac{2}{3} \quad 4 \quad 5\frac{1}{3} \qquad \qquad$

Copy and complete.

- $\sqrt{\frac{1}{3}} \times 8 = \boxed{}$
- - $\frac{3}{8} \times \boxed{} = 1\frac{7}{8}$

- **B** $\frac{1}{7} \times 12 =$
- $\frac{3}{11} \times 4 = \boxed{}$
- $\frac{1}{11} \times 4 = 1$ $\frac{2}{3} \times 1 = 3\frac{1}{3}$
- $\frac{5}{3} \times \boxed{} = 5$
- $8 \times 7 = 1^{\frac{5}{2}}$

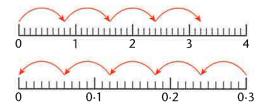

TARGET To count on and back in decimal steps.

Examples

Start at 0.

Count on four steps of 0.8

Count back in steps of 0.06 from 0.3

Answer 3.2

Answer 5 steps

A

Write out each sequence. Start at 0 each time.

- Count on 4 steps of 0.2.
- 2 Count on 5 steps of 0.3.
- Count on 6 steps of 0.5.
- Count on 4 steps of 0.8.
- 5 Count on 7 steps of 0.4.

Write out each sequence.

- 6 Count back in steps of 0.2 from 1.6.
- Ocunt back in steps of 0.3 from 2.1.
- 8 Count back in steps of 0.5 from 3.5.
- Ount back in steps of 0.7 from 2.1.
- 10 Count back in steps of 0.9 from 1.8.
- 1 Count back in steps of 0.6 from 2.4.

B

Complete each sequence.

- 1 2.4 3.2 6.4
- 2 5.4 3.0 2.4
- 3 0.05 0.1 0.15
- 4 0.18 0.16 0.14
- 5 0.22 0.3 0.38

Write out each sequence.

- 6 Count on seven steps of 0.6 from 0.
- Count back six steps of 0.8 from 7.2.
- 8 Count on five steps of 0.9 from 0.
- 9 Count back eight steps of 0.5 from 6.0.
- Count on nine steps of 0.3 from 0.

C

Complete each sequence.

- 1 0.5 1.0 1.5
- **2** 0.95 0.81 0.67
- 3 0.01 0.02 0.03
- 4 1.5 3.0 4.5

Copy and complete.

- 6 $0.02 \times \boxed{} = 0.18$
- $0.06 \times \boxed{} = 0.48$
- 8 $0.07 \times \boxed{} = 0.49$
- $9 \ 0.005 \times \boxed{} = 0.03$
- $0.008 \times \boxed{} = 0.32$

Copy and complete.

- $0.21 \div = 0.03$
- $0.72 \div \boxed{} = 0.09$
- $0.4 \div = 0.05$
- \bullet 0.063 ÷ \bullet = 0.007
- $0.04 \div = 0.008$

TARGET To count through zero using decimals and fractions.

Examples

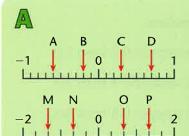

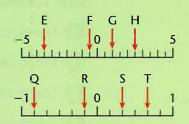

Count on 3.5 from -2. Answer 1.5

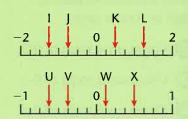

Count back 0.8 from 0.3.

Answer -0.5

- Give the value of each of the letters A–L in decimals.
- Q Give the value of each of the letters M-X in mixed numbers and fractions.

8

Look at the number lines in Section A.

- 1 Count on 0.6 from B.
- 2 Count on $\frac{5}{6}$ from R.
- 3 Count on 0.75 from J.
- 4 Count back 1 from O.
- 5 Count back 1.5 from G.
- 6 Count back $\frac{6}{8}$ from W.
- 7 Count on $1\frac{1}{3}$ from N.
- 8 Count on 2.5 from F.
- 9 Count on 1 from V.
- 10 Count back 0.8 from C.
- \bigcirc Count back $\frac{5}{6}$ from S.
- Count back 1.5 from K.

C

Look at the number lines in Section A.

- 1 Count on 2 from M.
- 2 Count on 5 from E.
- 3 Count on $1\frac{3}{8}$ from U.
- 4 Count back 1.4 from D.
- S Count back $1\frac{1}{6}$ from T.
- 6 Count back 2.5 from L.
- Count on 0.9 from A.
- 8 Count on $1\frac{4}{6}$ from Q.
- 2 Count on 2.75 from I.
- 10 Count back 1²/₃ from P.
- 1 Count back 4 from H.
- \bigcirc Count back $1\frac{3}{8}$ from X.

TARGET To solve number puzzles involving decimals.

In an addition pyramid, pairs of numbers are added together to make the number above them. (See page 109.)

Copy and complete the addition pyramids.

0.9

0.7

1.4

1.7

1.2 0.6

8.3

1.5

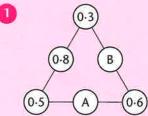

15

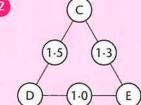

8.6

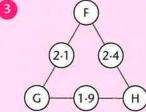

2.9

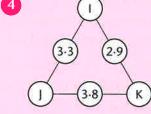

In an arithmagon the pair of numbers at the end of each side are added together to give the number between them. (See page 22.)

Find the missing numbers.

C

In a magic square the sum of each row, column and diagonal is the same. (See page 23.)

Copy and complete the magic squares.

)	0.6		
		0.9	
		0.7	1.2

	1	

	1.7	2.2	1.5
Ti de			
	2.1		

4	1.8		2.6
		2.3	
0	2		

TARGET To add decimals with the same number of decimal places.

Line up the decimal points and add.

Examples

$$3.592 + 1.487$$
 $3.592 + \frac{1.487}{5.079}$

Copy and complete.

- 11 A plant is 24-8 cm tall. In the following week it grows a further 17-5 cm. How tall is the plant at the end of the week?
- 12 Algy holds his breath for 36.49 seconds. Audrey holds it 8.27 seconds longer. How long does Audrey hold her breath?

B

Copy and complete.

- Jason caught 7-419 kg of fish. Ray caught 4-863 kg more. How much fish did Ray catch?
- Jodie walks 8.275 km in the morning and 6.185 km in the afternoon. How far has she walked altogether?
- of water in a puddle.

 After a short shower there is a further 9.36 litres. How much water is in the puddle after the shower?

C

Set out as in the examples.

$$13.28 + 8.625$$

$$4$$
 7.573 + 58.75

- 13 A racing car drives 8.675 km during warm up laps and 324.5 km in the race. How far does the car travel altogether?
- A horse trough holds 35.66 litres of water. 7.925 litres is added. How much water is in the trough?
- 13 A motorbike weighs 529.88 kg. Its rider weighs 78.134 kg. What is the combined weight of bike and rider?

56.77

+ 23.46

TARGET To add decimals with different numbers of decimal places.

Line up the decimal points when setting out.

Example

Add 18.75 and 6.925.

$$\begin{array}{r}
 18.75 \\
 + 6.925 \\
 \hline
 25.675
 \end{array}$$

A

Copy and complete.

- fiona buys a dress for £86.49 and shoes for £27.75. How much does she spend altogether?
- 14 Mary's car has a mileage of 926.5 miles at the start of May.
 During the month she drives 487.6 miles.
 What is the car's mileage at the end of May?

8

Set out as in the examples.

$$6.744 + 783.9$$

- In an endurance event competitors cycle 52.38 km and run 18.675 km. What is the total length of the course?
- A mineshaft is
 638.7 m deep. The
 miners drill down a
 further 47.55 m. How
 deep is the shaft now?

C

Set out correctly and work out.

297.56	6	8.764
17.9		41.97
+ 28.643		+ 157.8

- Orant buys 3.428 kg of potatoes, 1.29 kg of carrots and 0.375 kg of onions.
 What is the total weight of his shopping?
- A dairy produces 87.5 litres of milk on Monday, 117.225 litres on Tuesday and 93.75 litres on Wednesday. How much milk is produced in the three days altogether?

TARGET To subtract decimals with the same number of decimal places.

Line up the decimal points and subtract.

Examples

$$-\frac{1.78}{1.84}$$

2 151

$$9.318 - 0.425$$

A

Copy and complete.

- 11 Yalda has £9.27. She spends £4.58. How much does she have left?
- 17.4 m is cut off. How much rope is left?
- B Keith has 5.91 litres of paint. He uses 2.62 litres. How much is left?
- 14 A large bag of flour weighs 4.25 kg.
 A smaller bag weighs 1.75 kg less. What is the weight of the smaller bag?

B

Copy and complete.

- It takes Kabir 82-1
 seconds to solve a
 puzzle. Melody takes
 14-19 fewer seconds.
 How long does Melody
 take to solve the
 puzzle?
- A greengrocer has 87.46 kg of pears. 58.65 kg are sold. How much is left?
- The 18 hole golf course is 6⋅307 km long. The 9 hole course is 2⋅955 km long. How much longer is the 18 hole course?

C

Set out as in the examples.

$$31.2 - 5.75$$

- An oxygen tank holds 12·125 litres of liquid oxygen. 7·58 litres is used. How much oxygen is left?
- A farm has an area of 34.2 square kilometres. 18.47 km² is grazing land. How much of the farm is not grazing land?
- A bag of compost holds 73.5 kg. 8.825 kg is used. How much is left?

TARGET To subtract decimals with different numbers of decimal places.

When setting out line up the decimal points and put in the missing zeros.

Example

Subtract 0.625 from 27.45.

A

Work out

- 2 61·8 8 83·8 - 35·2 - 29·6
- 3 7.54 9 76.0 -6.35 -41.3
- 4 80.9 10 52.5 - 47.4 - 39.2
- 5 5.62 **11** 91.7 74.2
- 6 95.9 12 48.3 - 38.7 - 35.7
- is 52.3 m long. The lower playground is 38.6 m long. How much longer is the upper playground?
- Ross has £82.26.
 He spends £43.89.
 How much does he have left?
- (13) A sack of potatoes weighs 32.7 kg.
 14.6 kg is used. How much is left?

0.0

Work out

- 1 56·2 7 5·17 - 24·63 - 3·852

- 3 17·81 9 7·92 - 3·649 - 6·595
- 4 92·8 10 91·44 - <u>53·25</u> - <u>25·461</u>

- of water. A shower uses 45.35 litres. How much less water is used by the shower?
- 14 A footpath is 417.28 km long. In two days Rhoda walks 53.7 km. How much further does she have to go to complete the walk?
- 15 An ice cream tub holds 1.535 litres. 0.865 litres is used. How much is left?

C

Set out as in the examples.

- 1 6.512 0.837
- 2 5.635 2.52
- 3 72.1 19.41
- 4.706 2.77
- **5** 85·27 9·684
- 6 16.4 2.935
- 7 9.619 5.73
- 8 11.03 6.472
- 9 4.925 1.96
- 12.58 5.734
- **1** 3.348 1.476
- 12 50.26 3.822
- 13 The summit of Ben Nevis is 1·344 km above sea level. The highest mountain in England, Scafell Pike, has a height of 0·977 km. How much higher is the Scottish mountain?

14 A large parcel weighs 2.51 kg. A smaller one is 0.716 kg lighter. What is the weight of the smaller parcel?

TARGET To write fractions and decimals as percentages.

Per cent means out of 100. Percentages are fractions with a denominator of 100. The symbol for per cent is %.

Example

$$\frac{37}{100} = 0.37 = 37\%$$

To express fractions as percentages, change them to equivalent fractions with denominators of 100.

Examples

$$\frac{9}{10} = \frac{90}{100} = 90\%$$

$$\frac{1}{4} = \frac{25}{100} = 25\%$$

To express decimals as percentages, multiply by 100.

Examples

$$0.6 = (0.6 \times 100)\% = 60\%$$

 $0.42 = (0.42 \times 100)\% = 42\%$

It is useful to know that:

$$\frac{1}{100} = 0.01 = 1\%$$
, $\frac{2}{100} = 0.02 = 2\%$, etc.

$$\frac{1}{10} = 0.1 = 10\%, \frac{2}{10} = 0.2 = 20\%$$
, etc.

$$\frac{1}{4} = 25\%$$
, $\frac{1}{2} = 50\%$, $\frac{3}{4} = 75\%$.

Use 10×10 grids of small squares. Shade in:

- 10 squares
- 3 40 squares
- 2 3 squares
- 8 squares

Express each shaded area as:

- a) a fraction
- b) a decimal
- c) a percentage.
- Sopy and complete the table.

Fraction	Decimal	Percentage
1/10		
1/2		
1 100		
3 10		
1		
	0.25	
	0.6	
	0.17	
	0.9	
	0.75	

Copy the sentences changing each fraction to a percentage.

- Vicki and Jay each had half of the sweets.
- When the bus stopped one quarter of the passengers got off.
- Seven hundredths of the apples were rotten.
- The postman had completed three quarters of his round.
- 10 Seven tenths of the children at the party were 10 years old.

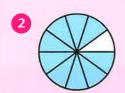

Express each shaded area as:

- a) a fraction
- b) a decimal
- c) a percentage.

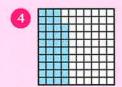

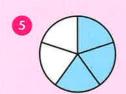

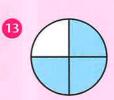

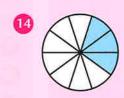

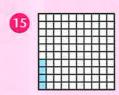

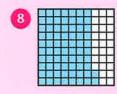

C

Write each fraction as

- a) a decimal
- b) a percentage.

 $1 \frac{3}{10}$

 $\frac{8}{10}$

 $9 \frac{1}{20}$

24 15%

- 23 17% of the pupils at a school came by bus. What percentage did not come by bus?
- 26 Hats were worn by 85% of the ladies at a wedding. What percentage did not wear hats?
- Two fifths of the milk sold in a shop was skimmed milk and 32% was semi skimmed. What percentage was full fat milk?
- One quarter of the audience at a film were women. 19% were men. What percentage were children?
- 29 Copy and complete the table.

Item	Total made	Sold	%age sold	%age unsold
Loaves	100	83		VI.
Rolls	200	154		
Pies	25	14		
Pasties	20	13		
Cakes	50	46		

To make connections between fractions, decimals and TARGET percentages.

Examples

$$\frac{1}{10} = 0.1 = 10\%$$

$$\frac{1}{100} = 0.01 = 1\%$$

$$\frac{1}{100} = 0.01 = 1\% \qquad \qquad \frac{1}{4} = 0.25 = 25\%$$

$$\frac{2}{10} = 0.2 = 20\%$$

$$\frac{2}{100} = 0.02 = 2\%$$

$$\frac{1}{2} = 0.5 = 50\%$$

$$\frac{3}{10} = 0.3 = 30\%$$

$$\frac{3}{100} = 0.03 = 3\%$$

$$\frac{3}{100} = 0.03 = 3\%$$
 $\frac{3}{4} = 0.75 = 75\%$

and so on

and so on

Write True or False.

$$\frac{3}{10} = 0.3$$

$$\frac{1}{2} = 0.2$$

$$\frac{1}{4} = 25\%$$

$$\frac{7}{10} = 70\%$$

$$0.4 = \frac{1}{4}$$

$$60 \cdot 75 = \frac{3}{4}$$

$$\bigcirc 0.1 = 10\%$$

$$80.8 = 8\%$$

- Rewrite Questions 1 to 4 in Section B, changing each measurement to the metric equivalent.

TARGET To solve word problems involving conversion of units of length.

Example

The first steeplechase was 3-8 km long. The next race was 630 m longer. How long was the second race?

 $3.8 \,\text{km} = 3800 \,\text{m}$ 3800 + 630 = 4430 $4430 \,\text{m} = 4.43 \,\text{km}$ Answer: $4.43 \,\text{km}$

- 1 A running track is 400 m long. Carrie runs eight laps. How far is this in kilometres?
- 2 Last year Lee's foot was 14.5 cm long. This year it is 8 mm longer. How long is Lee's foot now?
- 3 A pipe is three metres long. Three 60 cm lengths are cut off. How long is the pipe which is left in metres?
- 4 Mark walks between home and school four times each day. He works out that he walks 2.8 km daily. How far is it from Mark's home to his school in metres?
- 3 A 10p coin is 2.4 cm wide. A 5p coin is 7 mm shorter. How wide is a 5p coin?
- 6 Carl is 1.25 m tall. His father is 40cm taller. How tall is Carl's father?

- B
- 1 A one pound coin is 3 mm thick. How tall is a stack of twelve £1 coins in centimetres?
- 2) The end of a garden is 12.4 m wide. There is a gate 80 cm wide exactly in the centre of the garden wall. How long is the wall either side of the gate?
- 3) Rolls of cable are 200 m long. 4.8 km of cable is needed. How many rolls are required?
- 4 A shadow is 14-2 cm long. Thirty minutes later it is 27 mm shorter. How long is the shadow now?
- A rope is 5.3 m long. Four equal lengths are cut off. 3.7 m is left. How long are the four lengths in centimetres?
- 6 The course of a crosscountry race is 2 laps of 1.4 km and 3 laps of 750 m. How long is the race?

- C
- 1 A stamp is 26 mm long and 17 mm wide. What is the perimeter of the stamp in centimetres?
- Wind turbines are spaced 150 m apart. There are 25 in a row. How long is the row in kilometres?
- 3 A pile of 25 books is 20 cm tall. How thick is each book in millimetres?
- 4 Square carpet tiles are 40 cm long. How many are needed to cover the floor of a room 6 m long and 4.8 m wide?
- 5 There are eighteen candles in a packet. Each candle is 12 cm long. What is the total length of the candles?

6 A rectangular field has a perimeter of 2.09 km. It is 480 m wide. How long is the field?

TARGET To solve word problems involving conversion of units of weight.

Example

Each salmon fillet weighs 200 g. There are 6 fillets in each pack. What is the weight of 50 packs in kilograms?

 $200 \text{ g} \times 6 = 1200 \text{ g}$ $1200 \text{ g} \times 50 = 60000 \text{ g}$ 60000 g = 60 kgAnswer: 60 kg

- When he was born Frank weighed 4.2 kg. This was 500 g more than Sally. What did Sally weigh at birth?
- 2 A bird feeder holds 200 g of seeds. How many times can it be filled from 1 kg of seed?
- 3 A cereal bar weighs 100 g. There are 24 in a box. What is the total weight of the bars in kilograms?
- 4 Three 500 g weights are put on a balance. Four 200 g weights are added. How much weight is on the balance altogether, in kilograms?
- 5 A small box of cornflakes weighs 750 g. A large box weighs 500 g more. What does the large box weigh in kilograms?
- 6 Bradley buys 0.6 kg of mince. One quarter is used. How much is left in grams?

B

- 1 A bag of chips weighs 2.35 kg. 700 g is eaten. How much is left?
- 2 A can of fish weighs 165 g. What do ten cans weigh in kilograms?
- 3 Sugar cubes weigh 10 g. How many cubes are there in a 1.2 kg box?
- 4 A chef is preparing a meal for 120 people. Each meal needs 200 g of potatoes. How many 6 kg bags of potatoes are needed?
- 5 A box containing thirty packets of biscuits weighs 4-1 kg. Each packet of biscuits weighs 130 g. What does the box itself weigh?
- 6 Laurel's suitcase and luggage weigh 20.4 kg. She takes out boots weighing 900 g and puts in sandals weighing 450 g. What is the weight of the suitcase and luggage now?

- C
- 1 Scott cooks 0.8 kg of pasta. This provides five servings. How much pasta is in each serving in grams?
- 2 A laptop weighs 2.47 kg. Its case weighs 725 g. What is the combined weight of laptop and case?
- 3 A bar of soap weighs 85 g. What is the weight of forty bars in kilograms?
- 4 A 2 kg bag provides enough flour for 25 rolls. How much flour is needed for eight rolls in grams?
- Jamie orders three
 24 kg bags of coal.
 During November,
 December and January
 he uses 600 g daily.
 How much coal is left
 at the end of January?
- 6 Marina buys 0.6 kg of cheese. She uses two fifths. She uses a further 175 g. How much cheese is left?

TARGET To solve word problems involving conversion of units of capacity.

Example

A saucepan holds 2.3 litres of boiling water. 25 ml evaporates every minute. How much water is left if it boils for 30 minutes?

 $25 \,\text{ml} \times 30 = 750 \,\text{ml}$ $750 \,\text{ml} = 0.75 \,\text{litres}$ 2.3 - 0.75 = 1.55Answer: $1.55 \,\text{litres}$

- 1 Thirteen people order soup in a restaurant.
 Each bowl holds
 300 ml. How much soup is served in litres?
- A watering can holds 3 litres. 600 ml is used. How much water is left in the can?
- 3 April has 800 ml of paint left. She buys a 2.5 litre can. How much paint does she have now?
- 4 At a party there are three jugs each holding 1.5 litres of drink, and two bottles, each holding 700 ml. How much drink is there altogether at the party?
- 5 A tub holds two litres of ice cream. A quarter is used. The rest is divided into ten equal servings. How much ice cream is in each serving?

- 8
- 1 Each lolly is made using 50 ml of juice. How many lollies can be made from 4-8 litres of juice?
- 2 A bowl is filled with 1.9 litres of hot water and 850 ml of cold water. How much water is in the bowl?
- 3 A kettle holds 1.6 litres of water. Three mugs of tea are made each using 250 ml of water. How much water is left in the kettle?
- 4 A milk bottle holds two litres. One fifth is used at breakfast. A further 220 ml is used at lunchtime. How much milk is left?
- 5 A hose uses 300 ml of water every second.
 How much water is used in one and half minutes in litres?

- C
- 1 A small tube of paint holds 24 ml. How many tubes can be made from 1.2 litres?
- 2 Each bottle of lemon juice holds 120 ml.
 There are 36 bottles in a box. How much lemon juice is in the box?
- 3 A drink is made with 1-8 litres of water and 450 ml of juice. It is poured equally into nine glasses. How much drink is in each glass?
- 4 At a steady speed a car uses 80 ml of petrol every minute. How much will it use in 1 hour and 45 minutes?
- 5 At a wedding the 64 guests are each served with a 150 ml glass of champagne. How many 1.2 litre bottles are needed?

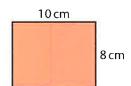

TARGET To calculate the area and perimeter of squares and rectangles.

The area of a shape is the amount of surface it covers.

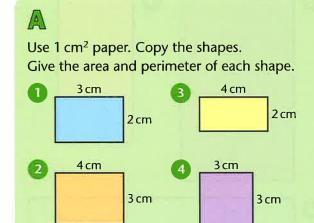

The perimeter of a shape is the distance around its edges.

Example

Perimeter = (length + width)
$$\times$$
 2
= 18cm \times 2
= 36 cm

Area = length
$$\times$$
 width
= $(10 \times 8) \text{ cm}^2$
= 80 cm^2

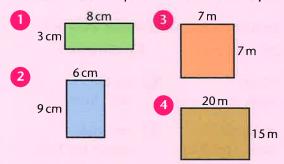

For each of these shapes work out:

- a) the area
- b) the perimeter
- sides 5 cm 3 cm
- 8 square sides 5 cm
- 6 square sides 4 cm
- 9 rectangle sides 10 cm 2 cm
- 7 rectangle sides 7 cm 2 cm
- rectangle sides 6 cm 4 cm

Give the area and perimeter of each shape.

Copy and complete the table.

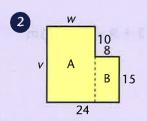

Length (cm)	Width (cm)	Perimeter (cm)	Area (cm²)
8	5	U - 2431	
	4	34	
12			84
9		36	
	5	FRM_8	100

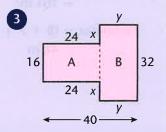

For each shape work out:

- a) the area
- b) the perimeter
- 5 rectangle sides 8 cm 6 cm
- square sides 12 cm
- 6 rectangle sides 5 m 17 m
- 8 rectangle sides 15 m 3 m
- A rectangular field is 80 m long and 50 m wide. Find its area and perimeter.

For each of the following shapes find:

- a) the perimeter (cm)
- b) the area (cm²).

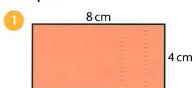

TARGET To calculate the area and perimeter of squares, rectangles and related irregular shapes.

To understand the difference between area and perimeter think of a field. The perimeter is the length of the fence around the field. The area is the field itself.

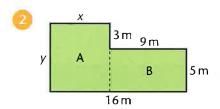

Examples

Area = length
$$\times$$
 width
= (8×4) cm²
= 32 cm²

Perimeter =
$$2 \times (\text{length} + \text{width})$$

= $2 \times (8 + 4) \text{ cm}$
= $2 \times 12 \text{ cm}$
= 24 cm

$$x = 7 \text{ m } (16 \text{ m} - 9 \text{ m})$$

 $y = 8 \text{ m } (5 \text{ m} + 3 \text{ m})$

Area of A =
$$(8 \times 7) \text{ m}^2$$

= 56 m^2
Area of B = $(9 \times 5) \text{ m}^2$
= 45 m^2

Total area =
$$(56 + 45) \, \text{m}^2$$

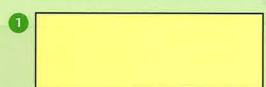

= $101 \, \text{m}^2$

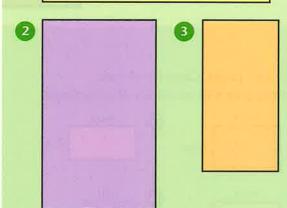

Perimeter =
$$(8 + 7 + 3 + 9 + 5 + 16)$$
 m
= 48 m

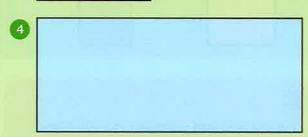

A

Measure each rectangle and work out:

- a) the perimeter
- b) the area.

For each of the following shapes work out:

- a) the perimeter
- b) the area
- square sides 3 cm
- square sides 5 cm
- 6 rectangle sides 2 cm 8 cm
- 8 rectangle sides 4 cm 7 cm

Use 1 cm squared paper.

- Find as many rectangles as you can with an area of 18 cm². Work out the perimeters.
- 10 Find as many rectangles as you can with a perimeter of 20 cm. Work out the areas.
- Draw a square with a perimeter of 24 cm.

 Work out the area.

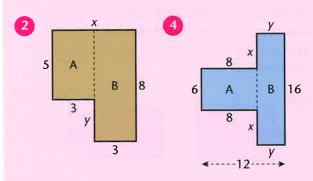

8

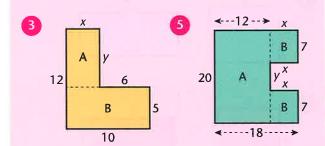

1 Copy and complete the table, showing the measurements of rectangles.

Length (cm)	Width (cm)	Perimeter (cm)	Area (cm²)
9	3		
12		34	
	7		56
16			32
	10	60	
		26	42
	4		48
		40	75

For each of the following rectilinear shapes find:

- a) the missing lengths x and y
- b) the perimeter of the shape.

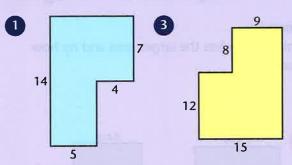

- 6 For each of the above shapes work out:
 - a) the area of rectangle A
 - b) the area of rectangle(s) B
 - c) the area of the whole shape.

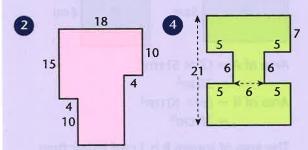

C

For each of the following rectilinear shapes find:

- a) the area
- b) the perimeter.

All measurements are in centimetres.

- S A playground has a length of 30 m and an area of 750 m².
 What is the length of the railings around the playground?
- 6 A painting is 50 cm long and 40 cm wide. Its frame is 5 cm wide.
 - a) What is the perimeter of the framed painting?
 - b) What is the area of the unframed painting?
 - c) What is the area of the framed painting?
- One quarter of this garden is a patio.

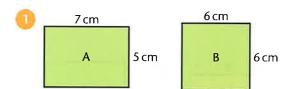

- a) What is the area of the lawn?
- b) Patio tiles are 50 cm by 50 cm. How many are needed to cover the patio?
- c) What is the area of one tile?
 Write your answer in square
 centimetres and in square metres.

TARGET To calculate and compare the areas of squares and rectangles.

Examples

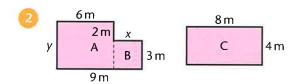

Which shape has the larger area and by how much?

Area of A =
$$(7 \times 5) \text{ cm}^2$$

= 35 m^2
Area of B = $(6 \times 6) \text{ cm}^2$
= 36 cm^2

The area of square B is 1 cm² larger than that of rectangle A.

$$x = 9 \text{ m} - 6 \text{ m} = 3 \text{ m}$$

 $y = 3 \text{ m} + 2 \text{ m} = 5 \text{ m}$

Area of A =
$$(6 \times 5) \,\text{m}^2$$

= 30 \,\text{m}^2

Area of B =
$$(3 \times 3) \text{ m}^2$$

= 9 m^2

Area of irregular shape $= 39 \,\mathrm{m}^2$

Area of rectangle
$$C = (8 \times 4) \text{ m}^2$$

= 32 m^2

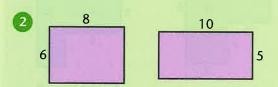

The area of the irregular shape is 7 m² larger than that of rectangle C.

	-2		
II.	М	V	
V.	Δ	Α	
E_{i}	-	a	A.

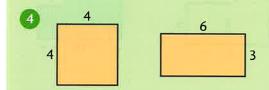

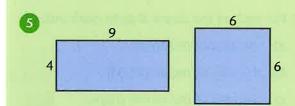

Length	Width	Area	
6 cm	4 cm		
8 cm	5 cm		
11 m		33 m ²	
9 m		54 m ²	
	8 cm	96 cm ²	
	10 cm	400 cm ²	
15 m	10 2 2 1	30 m ²	
	7 m	56 m ²	

For each of the following pairs of diagrams work out which rectangle has the larger area and by how much. All lengths are in centimetres.

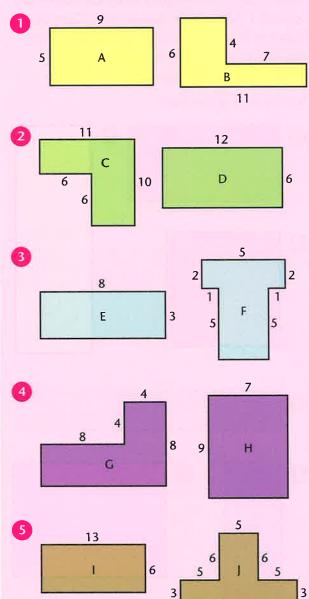

B

The following pairs of diagrams show the dimensions of rooms. For each pair work out which room has the larger area and by how much. All lengths are in metres.

13

12

10

K

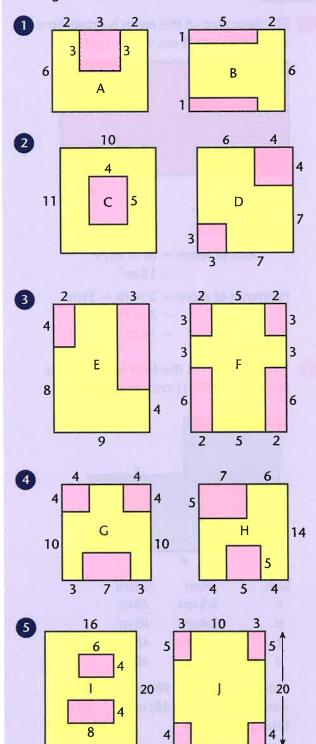

12

6

C

Each of the following pairs of diagrams shows two possible ways a shop might use its available floor space for display (yellow) and storage (pink). Work out which plan provides the larger display area and by how much.

All lengths are in metres.

3

TARGET To calculate areas and perimeters from scale drawings.

Examples

1 The floor plan of this room is drawn to a scale of 1:100 (1 cm shows 1 m).

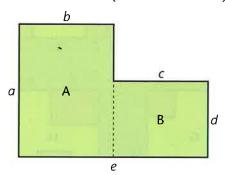

Plan Actual Length of room 6 cm 6 m Width of room 3 cm 3 m

Area of room = $(6 \times 3) \text{ m}^2$ = 18 m^2

Perimeter of room = $2 \times (6 + 3) \text{ m}$ = $2 \times 9 \text{ m}$ = 18 m

2 The floor plan of this field is drawn to a scale of 1:2000 (1 cm shows 20 m).

Side	Plan	Actual
а	3⋅5 cm	70 m
b	2-4 cm	48 m
С	2.4 cm	48 m
d	2.0 cm	40 m

Area of A = $(70 \times 48) \,\text{m}^2 = 3360 \,\text{m}^2$

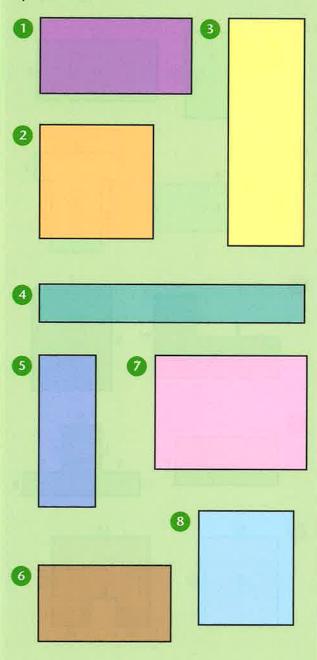

Area of B = $(40 \times 48) \text{ m}^2 = 1920 \text{ m}^2$ Total area of field = 5280 m^2

Perimeter = (70 + 48 + 48 + 40 + 96) m = 302 m

A

These plans of rectangular fields are drawn to a scale of 1:1000. 1 cm shows 10 m. Copy each plan and label the actual length and width of the field in metres. Then work out:

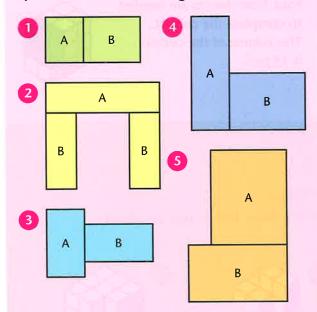

- a) the perimeter of the field
- b) the area of the field.

B

The following diagrams show the floor plans of buildings. They are drawn to a scale of 1:1000 (1 mm shows 1 m). For each diagram work out:

- a) the perimeter of the building
- b) the area of each room (A or B)
- c) the area of the building.

Use a scale of 1:200 (1 cm shows 2 m).

- 6 Draw the plan of a room with a width of 6 m and an area of 48 m². Label the dimensions (length and width) and work out the perimeter of the room.
- 7 Draw the plan of a room with a width of 5 m and an area of 60 m². Label the dimensions and work out the perimeter of the room.

Use a scale of 1:500 (1 cm shows 5 m). Design a bungalow to be built in a plot 20 m long and 15 m wide.

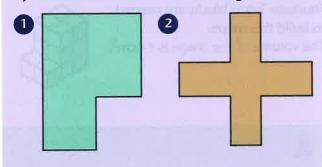

8 Draw the plan of your bungalow with a kitchen, a bathroom, a lounge and two bedrooms. Label the actual dimensions of each room. Work out the area of each room.

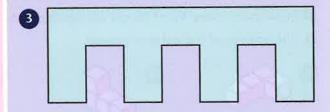

C

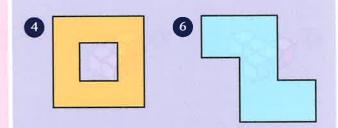

The following diagrams show the floor plans of buildings. They are drawn to a scale of 1:1000 (1mm represents 1 m).

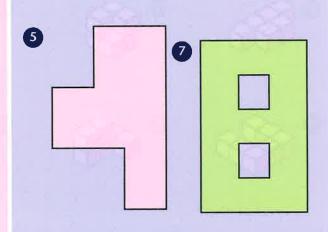

For each building:

- a) copy the diagram and label the building's actual dimensions
- b) work out the area of the building.

TARGET To recognise volume by using 1 cm³ blocks to build and visualise cuboids.

The volume of a shape is the amount of space it fills.

It is measured in cubic units, such as cubic centimetres (cm³).

Examples

Fourteen 1 cm³ blocks are needed to build this shape.

The volume of the shape is 14 cm³.

Four 1 cm³ blocks are needed to complete the cuboid. The volume of the cuboid is 18 cm³.

For each of the following shapes write down:

- a) how many 1 cm³ blocks are needed to build the shape
- b) how many more 1 cm³ blocks are needed to turn the shape into a cube or cuboid
- c) the volume of the cube or cuboid.

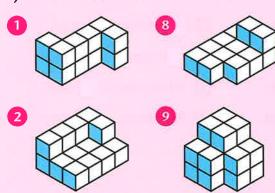

B

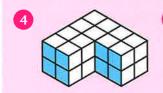

For each of the following shapes write down:

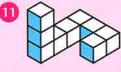

- a) the volume of the shape
- b) the number of 1 cm³ blocks needed to turn the shapes into a cube or cuboid
- c) the volume of the cube or cuboid.

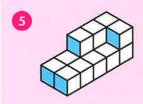

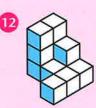

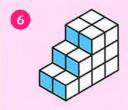

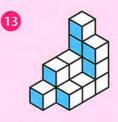

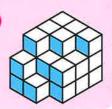

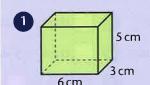

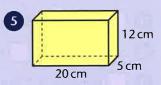

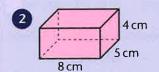

C

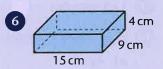

For each of the following shapes write down:

- a) the number of 1 cm³ needed to cover the base of the cuboid
- b) the number of layers of 1 cm³ needed to fill the cuboid
- c) the volume of the cuboid.

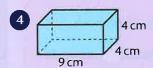

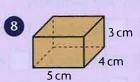

The formula for the volume of a cuboid is: VOLUME = LENGTH × WIDTH × HEIGHT Use this formula to copy and complete the table.

LENGTH	WIDTH	HEIGHT	VOLUME
7 cm	2 cm	3 cm	42 cm ³
25 cm	10 cm		3000 cm ³
6 cm	4 cm	5 cm	
8 cm		4 cm	96 cm ³
	8 cm	5 cm	480 cm ³
9 cm	5 cm	6 cm	
15 cm	6 cm		360 cm ³
10 cm	7-5 cm		450 cm ³

What is the volume of a cube with 20 cm edges?

TARGET To solve problems involving converting between units of time.

A				
Copy and complete.				
seconds = 3 minutes	days = 2 weeks	months = 4 years		
2 300 seconds = minutes 6	days = 5 weeks	months = 20 years		
3 minutes = 7 hours	21 days = weeks	10 60 months = years		
4 120 minutes = hours	70 days = weeks	12 96 months = years		
13 How many complete weeks and days are there in:				
a) April b)	May?			
14 How many minutes are there in two and a half hours?				

B
Copy and complete.
seconds = 1 minute 47 seconds
2 500 seconds = minutes seconds
minutes = 2 hours 35 minutes
419 minutes = hours minutes
5 hours = 5 days 17 hours
6 100 hours = days hours
days = 2 weeks 3 days
8 40 days = weeks days
months = 3 years 6 months
70 months = years months
11 There are exactly 13 complete weeks in the first three months of a year. Is it a leap year?
12 A ship leaves port at 14:45 on Sunday. It returns at 09:20 on Wednesday. How long was the voyage in days, hours and minutes?

C	
0	Adrian's marathon time is 2 hours
	58 minutes and 39 seconds. This is 213
	seconds faster than his previous best
	time. What was his previous best time?
2	It is Tuesday. There are 100 days until
	Christmas Day.
	a) What is the date that Tuesday?
	b) What day is Christmas Day?
3	Ivan leaves Moscow at 10:27 on 26th
	June. He arrives in Vladivostock at 16:05
	on 2nd July. How long has his journey
	taken in days, hours and minutes?
4	A machine makes one bolt every second
	How long will it take to make 10 000
	bolts?
5	How many weeks and days are there in:
	a) the first 4 months of 2020
	b) the last 6 months of 2020?
•	How many hours are there in July?

TARGET To calculate complements of one unit of measure.

Example $= 1 \ell \text{ (litre)}$ Answer 0.27ℓ

TARGET To multiply and divide measures mentally, converting between units.

Examples $400 \,\mathrm{g} \times 60 = \mathrm{kg}$

 $400 \,\mathrm{g} \times 60 = 24\,000 \,\mathrm{g}$

Answer 24 kg

3 litres \div 5 = $\boxed{}$ ml

3 litres = $3000 \,\text{ml}$ $3000 \div 5 = 600 \,\text{ml}$

Answer 600 ml

- 31		v	
	٨	N	
V.	A	Д	
		-	۰

Copy and complete.

1 50 cm \times 8 = m

 $2 700 g \times 5 = \boxed{kg}$

3 30 mm \times 12 = cm

4 600 ml \times 3 = litres

5 $200 \,\mathrm{m} \times 7 = \,$ km

6 40 cm \times 4 = m

 $g \times 9 = 7.2 \text{ kg}$

8 $ml \times 10 = 6$ litres

9 $m \times 6 = 5.4 \text{ km}$

 $10 \text{ cm} \times 2 = 2.2 \text{ m}$

 \bigcirc ml \times 11 = 5.5 litres

 $mm \times 8 = 56 \text{ cm}$

28 cm ÷ 4 = mm

15 6.3 litres \div 7 = ml

 $0.4 \, \text{km} \div 10 = \text{m}$

 $\sqrt{10} 4.5 \, \text{m} \div 9 = \boxed{\text{cm}}$

1.8 kg ÷ 2 = g

 $19 \text{ km} \div 12 = 600 \text{ m}$

20 litres $\div 5 = 80 \, \text{ml}$

21 $\log kg \div 11 = 300 g$

 $22 \text{ m} \div 3 = 70 \text{ cm}$

23 cm ÷ 8 = 40 mm

24 litres $\div 6 = 600 \,\text{ml}$

B

Copy and complete.

 $190 g \times 40 = kg$

2 $30 \text{ m} \times 900 = \text{km}$

 $3 500 \,\mathrm{ml} \times 50 =$ litres

4 $800 \times 60 \, \text{cm} = \boxed{\text{m}}$

 $5 700 \times 20 \, \text{g} = \text{kg}$

 $6 30 \times 80 \,\mathrm{ml} = |$ litres

 $7 \text{ m} \times 110 = 6.6 \text{ km}$

9 $\boxed{\quad \text{ml} \times 70 = 56 \text{ litres}}$

 $100 \mod \times 120 = 10.8 \text{ m}$

 $10 \text{ cm} \times 600 = 240 \text{ m}$

 $ml \times 900 = 18$ litres

13 $28 \text{ kg} \div 70 = \boxed{\text{g}}$

 $\frac{1}{4}$ 3.6 km ÷ 30 = $\frac{1}{4}$ m

15 24 litres ÷ 1200 = ml

 $16 \cdot 4.5 \,\mathrm{m} \div 50 = \, \boxed{\mathrm{mm}}$

00 66 m ÷ 60 = cm

18 22 litres ÷ 110 = ml

 $m \div 400 = 80 \, \text{cm}$

20 kg ÷ 90 = 60 g

 $20 \text{ km} \div 20 = 1200 \text{ m}$

22 litres \div 80 = 90 ml

 $23 \text{ m} \div 700 = 70 \text{ mm}$

 $20 \, \text{kg} \div 120 = 50 \, \text{g}$

C

Copy and complete.

150 g \times 12 = kg

2 $720 \,\mathrm{m} \times 3 = \,$ km

3 560 ml \times 4 = litres

 $35 \times 70 \, \text{cm} = \boxed{\text{m}}$

6 $230 \times 60 \, \text{g} = \text{kg}$

 $m \times 200 = 160 \, \text{km}$

 $m \times 50 = 55 \text{ km}$

 $ml \times 800 = 4800$ litres

13 $14 \times 110 \,\text{m} = 10 \,\text{km}$

14 $37 \times 60 \, \text{cm} = \boxed{m}$

15 $23 \times 700 \, \text{ml} =$ litres

 $16 56 \times 120 g =$ kg

 $75 \times 40 \,\mathrm{mm} = \mathrm{cm}$

18 $48 \times 800 \,\text{m} = \text{km}$

 \bigcirc × 300 ml = 2400 litres

 $20 \times 120 \, \text{g} = 36 \, \text{kg}$

 $21 \times 80 \, \text{cm} = 7.2 \, \text{km}$

 $22 \times 20 \,\mathrm{mm} = 12 \,\mathrm{m}$

 $23 \times 900 \,\mathrm{ml} = 630 \,\mathrm{litres}$

 $24 \times 50 \,\mathrm{m} = 450 \,\mathrm{km}$

TARGET To add metric measures using a formal written method.

Example

 $38.29 \ell \text{ (litres)} + 8.475 \ell$

Line up the decimal points. $\begin{array}{r}
38.29 \quad \ell \\
+ \quad 8.475 \quad \ell \\
\hline
46.765 \quad \ell
\end{array}$

A

Copy and complete.

- 1 cm 5 km 343·5 506·4 +247·8 +125·9
- 2 m 6 km 43.67 41.56 +12.86 +36.74
- 3 kg 7 litres 271.9 352.3 + 194.2 +298.8
- 4 kg 8 litres 63.58 70.97 +29.48 +49.67

Set out correctly and work out.

- 9 357.5 kg + 154.6 kg
- 10 83.99 kg + 16.45 kg
- 1 248.6 cm + 225.9 cm
- 12 61.94 m + 48.37 m
- \bigcirc 566.8 ℓ + 337.3 ℓ
- $4 34.32 \ell + 17.49 \ell$
- 15 471.7 km + 235.8 km
- 67-89 km + 45-67 km

8

Copy and complete.

Set out correctly and work out.

- 10.76 ℓ + 9.895 ℓ
- **1** 7⋅45 ℓ + 652⋅8 ℓ
- 10 285.9 m + 34.209 m
- 12 355.48 m + 1687.0 m
- 1 76.822 kg + 76.8 kg
- 47.39 kg + 4.85 kg
- 15 98-46 km + 205-577 km
- 1329·5 km + 84·536 km

C

Set out correctly and find the total of each list.

- 1 km 7 m 139.6 5.633 74.275 67.4 8.59 129.09
- 2 litres 8 kg 4.682 6071.2 12.85 59.966 3167.0 72.47
- 3 m 9 km 903.57 584.28 2326.2 5.825 0.563 488.0
- 4 kg 10 litres 27.49 40.199 156.0 167.86 23.652 325.2
- 5 km 11 m 4.07 68.74 19.445 29 306.0 3.8 7.395 125.3 147.2
- 6 litres 12 kg 1839 658·5 43·653 283·65 752·7 51·037 94·83 24·25

TARGET To subtract metric measures using a formal written method.

Example

 $13.25 \, \text{kg} - 6.385 \, \text{kg}$

Line up decimal points. Put in missing zeros. $\frac{\cancel{13} \cdot \cancel{23}0}{\cancel{3} \cdot \cancel{23}0} \text{ kg}$ $- \underbrace{6 \cdot 385}_{6 \cdot 865} \text{ kg}$

A

Copy and complete.

- 1 m 2 litres 3.73 2.46 -2.46 -1.27
- 2 cm 8 kg 54.8 73.5 -39.2 -39.1
- 3 km 9 m 9.07 3.83 -5.16 -1.59
- 4 litres 0 cm 46·2 97·4 -13·5 -21·5
- 5 km 1 kg 6.59 4.16 -3.83 -2.33
- 6 cm 12 litres 8.91 84.5 -7.08 -47.9
- 13 A washing machine uses 54-2 litres of water during a long wash and 38-7 litres during a short wash. How much more water is used during the longer wash?

B

Copy and complete.

- 1 m 7 m 58·27 43·6 -14·9 -29·251
- 2 kg 8 litres 21.4 95.209 - 5.82 - 8.4

- 4 km 10 m 297.45 81.3 + 47.6 -26.75
- 5 m 11 km 43.95 951.24 +68.9 - 54.78
- 6 kg 12 litres 86.58 17.947 + 7.47 - 4.999
- A railway route between two cities is 532.3 km long. A tunnel would shorten the journey by 78.65 km. What would be the length of the new route?

C

Find the total of each list.

- 1 kg 3 m 9.37 18.5 40.892 9.463 257.4 173.97
- 2 litres 4 km 36·259 0·624 1871·5 5·48 46·38 207·9 7·166 12·375

Work out

- 5 284·3 m − 6·84 m
- 6 47·15 kg 7·368 kg
- $\bigcirc 60.527 \ell 51.49 \ell$
- **8** 1526⋅4 km − 58⋅705 km
- 9 83·732 m 16·8 m
- **10** 95⋅06 kg 48⋅466 kg
- A full petrol tank holds
 41.2 litres. There is
 17.675 litres in the tank.
 How much petrol is
 needed to fill the tank?
- 12 A large turkey weighs 6.12 kg. A smaller one weighs 2.835 kg less. What is the weight of the smaller turkey?

TARGET To use mental methods to solve word problems involving conversion of units of measure.

Example

A full bottle of lemonade exactly fills eight 200 ml glasses.
What is the capacity of the bottle in litres?

 $200 \text{ ml} \times 8 = 1600 \text{ ml}$ 1600 ml = 1.6 litresAnswer 1.6 litres

- 1 There is 3.6 litres of hot water in a bowl.
 1.7 litres of cold water is added. How much water is in the bowl?
- 2 Felix weighs 37.2 kg. George weighs 1.5 kg less. What does George weigh?
- 3 Simone rides her horse 6.4 km four times in a week. How far has she ridden altogether?
- 4 Three identical boxes of cereal weigh 2.4 kg altogether. What does one box weigh?
- 5 A candle is 18 cm long. 7.4 cm is used. How much is left?
- 6 A suitcase weighs
 3.5 kg. The clothes
 inside the case weigh
 13.9 kg. What is the
 total weight of clothes
 and case?

- 0 0
- 1 A bottle holds 0.75 litres of water. 290 ml is drunk. How much water is left?
- 2 A football pitch is 91 m long. How far is it from the goal to the halfway line?
- 3 One can of peas weighs 0.35 kg. What do two cans weigh in grams?
- 4 A drainpipe is 2.8 m long. It is joined to a 65 cm length. What is the total length of the drainpipe?
- Harry has 1.2 kg of flour. He uses 580 g. How much flour is left?
- 6 A square piece of card has a perimeter of 0.7 m. What is the length of one side in cm?
- 7 One scoop of ice cream is 0.08 litres. How much is six scoops in millilitres?

- C
- 1 A pizza weighs 0.54 kg. It is cut into four equal slices. What is the weight of one slice in grams?
- One pound is worth 1-46 US dollars. What is £20 worth in dollars?
- 3 At high tide the beach is 0.047 km wide. At low tide it is 225 m wide. How much of the beach is tidal?
- 4 Twelve identical sachets of shampoo hold 0.3 litres altogether. How much shampoo is in one sachet in millilitres?
- A light bulb weighs 23 g. What is the weight of eighty bulbs in kilograms?
- 6 Ella makes a drink with 0.36 litres of water and 85 ml of orange juice. How much drink is there altogether?
- Hugh swims fifty lengths of a pool.
 Altogether he swims 2.25 km. How long is one length in metres?

TARGET To solve word problems involving measures using decimal notation.

Example

Large cans of paint hold 2.65 litres A small can holds 0.875 litres. How much more paint is there in the large can? Answer *There is 1.775 litres more paint in the large can.*

- A
- 1 Anita's father weighs 86.4 kg. Anita weighs half as much. How much does she weigh?
- 2 One cinema ticket costs £9.60. What do six tickets cost?
- 3 A washing machine uses 37.9 litres in the wash cycle and a further 18.6 litres in the rinse. How much water does it use altogether?
- 4 The temperature at 3 pm is 23.6°C. At 3 am it is 7.8°C. How much has the temperature fallen?
- 5 Ten pounds is 13 Euros. What is £1 in Euros?

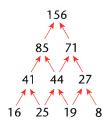

6 A fence is 46.8 m long. 7.3 m of the fence needs repairing. How long is the undamaged fence?

- B
- 1 A van is carrying freight weighing 276.8 kg. A further 69.54 kg is loaded on. What is the weight of the van's load?
- A square courtyard has a perimeter of 55 m. How long is one side?
- 3 A shower uses 9.4 litres of water every minute. How much water is used in five minutes?
- 4 Sahil runs the 400 m in 51.36 seconds. The winner is 2.68 seconds faster. What is the winner's time?
- Debbie works for five hours. She earns £76. How much does she earn each hour?
- 6 A tub of ice cream contains 2.5 litres.
 1.685 litres is eaten.
 How much is left?
- 7 Shoe boxes are 10.8 cm tall. How tall is a stack of 7 boxes?

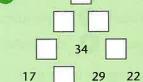

- C
- 1 A rectangular garden is 12 m wide and has an area of 282 m².
 - a) How long is the garden?
 - **b)** What is its perimeter?
- 2 A carpet costs £17.90 per square metre.
 Debbie needs 26 square metres. How much will Debbie's carpet cost?
- 3 A Ferrari maintained an average speed of 159.4 km per hour throughout a race. A Renault was 2.79 km per hour slower. What was the Renault's average speed?
- 4 A boiling saucepan holds 2.25 litres of water. 0.476 litres evaporates. How much water is left?
- 5 One bag of flour weighs 1.45 kg. What do sixteen bags weigh?
- 6 Eight centimetres is 3.12 inches. What is one centimetre in inches?

TARGET To solve number puzzles involving addition and subtraction.

In an addition pyramid, pairs of numbers are added together to make the number above them. Example

Copy and complete the addition pyramids.

2

183

15 33

3

237

19

16 18 21

Arrange the above numbers to form the bottom row of an addition pyramid with a top layer of 108.

5 Use the same four numbers. Find the largest possible top number.

B

Copy and complete the addition pyramids.

-7

-3

4.2 3.3

2.3

0.2

2

0.6 1.7 1.9

Arrange the above numbers to form the bottom row of an addition pyramid with a top layer of 12.

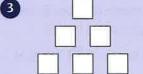

Use the same four numbers. Find the largest possible top number.

Copy and complete the addition pyramids.

23/4 $1\frac{1}{2}$

 $1\frac{1}{5}$ <u>7</u> 10

3

Arrange the above numbers to form the bottom row of an addition pyramid with a top layer of:

-3

a) 2

b) -20

c) 12

TARGET To identify right angles and other multiples of 90°.

A quarter turn is 90°. A half turn is 180°.

A three quarter turn is 270°.

A whole turn is 360°.

Find the new time if the hour hand of a clock turns:

- 90° from 9 o'clock
- 2) 180° from 3 o'clock
- 360° from 12 o'clock
- 4 90° from 3 o'clock
- 5 180° from 6 o'clock
- 6 90° from 12 o'clock
- 7 360° from 6 o'clock
- 180° from 9 o'clock.

How many degrees is the turn clockwise from:

- S to W
- W to N
- W to E
- S to N
- E to S
- N to E
- N to S
- 16 E to W?

How many degrees is the turn anti-clockwise from:

- W to S
- 2 N to W
- 18 N to S
- S to N
- 19 E to W
- E to N
- 20 S to E
- 24 W to E?

8

Find the new time if the hour hand of a clock turns:

- 180° from 8 am
- 2 90° from 1 pm
- 360° from 6 pm
- 270° from 5 am
- 180° from 10 pm
- 6 90° from 3 pm
- 7 360° from 2 am
- 8 270° from 11 am.

How many degrees is the turn clockwise from:

- S to W
- NE to SW
- 1 W to S
- SE to SE
- E to S
- SE to NE
- 15 N to S
- SW to NW?

How many degrees is the turn anti-clockwise from:

- E to N
- 18 NE to SW
- W to N
- 20 N to N
- SE to SW
- 22 NW to SW
- 🛂 S to E
- SW to NE?

C

How many degrees does the minute hand turn in:

- 1 15 minutes 5 45 minutes
- 2 5 minutes
- 6 20 minutes
- 3 55 minutes 7 60 minutes
- 4 10 minutes 8 35 minutes?

How many degrees is the turn clockwise from:

- 9 W to NW
- 10 S to SE
- SW to N
- 12 NE to W
- IB E to SW
- 14 NE to E
- 15 NW to S
- 16 N to NW?
- Calculate the missing angles a-h.

TARGET To compare different angles.

acute angles < 90°

 90° < obtuse angles < 180°

180° < reflex angles < 360°

Write each group of angles in order of size, smallest first.

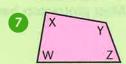

Place the angles in each shape in order, smallest first.

B Decide if each of the above angles A–Z is: a) acute b) right angle c) obtuse.

B

Write each group of angles in order of size, smallest first.

Place the angles meeting at each point in order of size, smallest first.

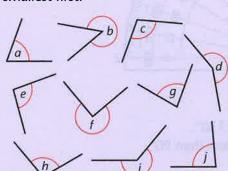

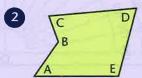

- 8 Decide if each of the above angles a-z is:
 - a) acute
- b) obtuse
- c) reflex.

1 Arrange these angles in order of size, smallest first.

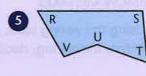

Arrange the angles in each shape in order of size, smallest first.

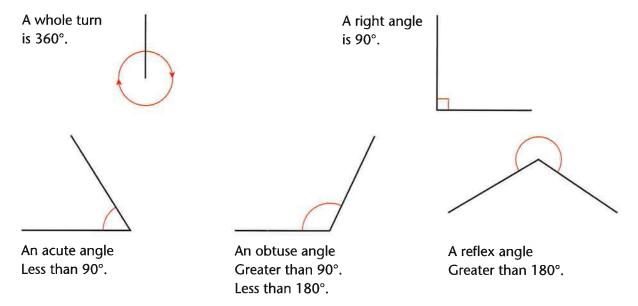

6 Decide if each of the above angles a-j and A–T is acute, obtuse or reflex.

TARGET To measure angles with a protractor and to recognise acute, obtuse and reflex angles.

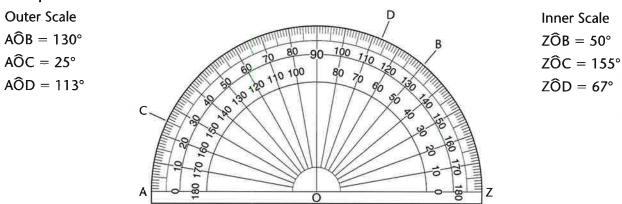

Angles measure the amount something turns or rotates. Angles are measured in degrees.

USING A PROTRACTOR

A protractor is used to measure or draw angles accurately. Most protractors have two scales, a clockwise outer scale and an anti-clockwise inner scale. It is important to use the correct scale.

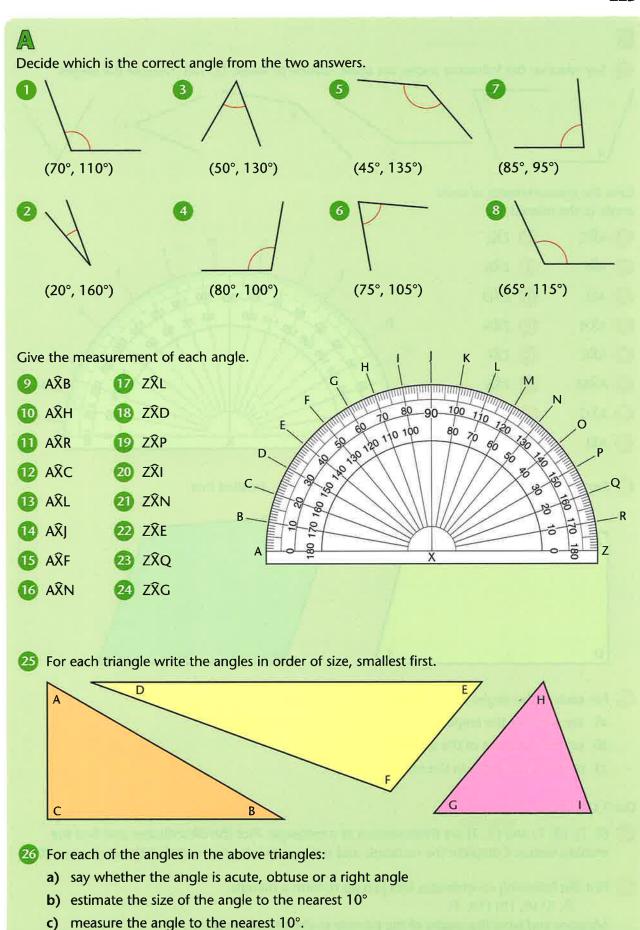

Examples

COMMON MISTAKES

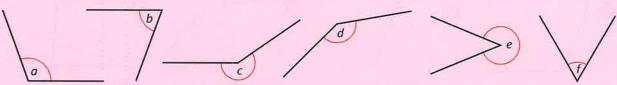

- Using the wrong scale. Angle ZOB above is 50° and not 130°.

 Before measuring, decide if the angle is greater than or less than 90°.
- Reading the scale in the wrong direction. This mistake occurs more often when using the inner scale. Angle ZOD above would be incorrectly read as 73° and not as 67°.

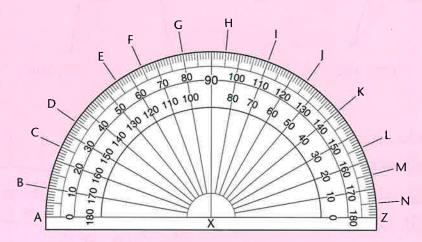

B

1 Say whether the following angles are acute, obtuse or reflex. Do not measure the angles.

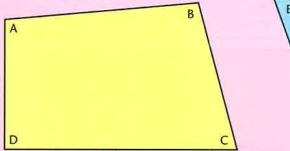

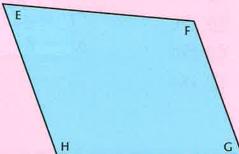

Give the measurements of each angle to the nearest 5°.

- 2 AXC

- ₩ ZŶC

18 For each quadrilateral write the angles in order of size, smallest first.

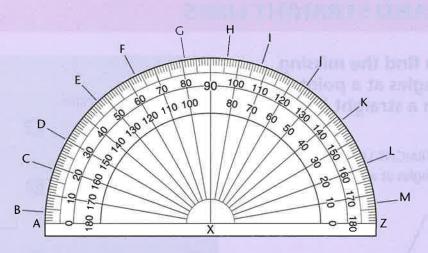

- 19 For each of the angles in the above quadrilaterals:
 - a) say whether the angle is acute, obtuse or a right angle
 - b) estimate the size of the angle to the nearest 5°
 - c) measure the angle to the nearest 5°.

Use 1 cm² paper

- (0, 7), (2, 1) and (5, 2) are three vertices of a rectangle. Plot the co-ordinates and find the missing vertex. Complete the rectangle and use a protractor to check that the angles are 90°.
- 21 Plot the following co-ordinates and join up to form a triangle.
 (5, 5) (6, 10) (10, 3)

Measure and label the angles of the triangle to the nearest degree.

C

Give the measurement of each angle to the nearest degree.

23 ZÂC24 ZÂI

Estimate the size of these angles and then measure them to the nearest degree. Use a 360° protractor. If you are using a 180° protractor, measure the inner angle and calculate the required angle.

- Use 1 cm² paper. Plot these co-ordinates and join up in the order given to form a quadrilateral. (0, 0) (1, 3) (7, 7) (5, 0) (0, 0)

 Measure the angles of the quadrilateral.
- 27 Draw a quadrilateral with a reflex angle. Measure and label the angles.
- Use 1 cm² paper. Plot these co-ordinates and join up to form a triangle. (1, 1) (2, 5) (7, 2). Measure and label the angles. Find the sum of the angles.
- 29 Draw five different triangles. Measure and label the angles. Find the sum of the angles of each triangle. What do you notice?

TARGET To find the missing angles at a point and on a straight line.

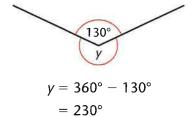

Examples

ANGLES ON A STRAIGHT LINE

The sum of the angles at a point on a straight line is 180°.

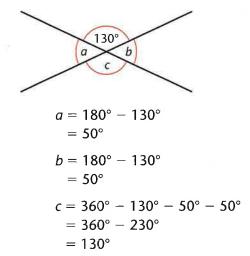

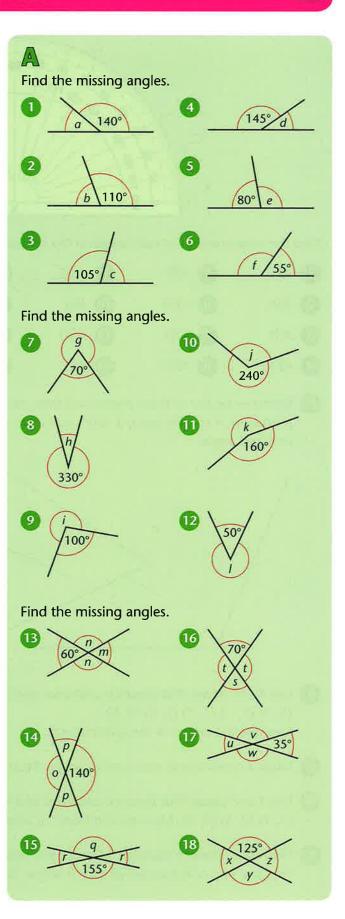

ANGLES AT A POINT A whole turn is 360°.

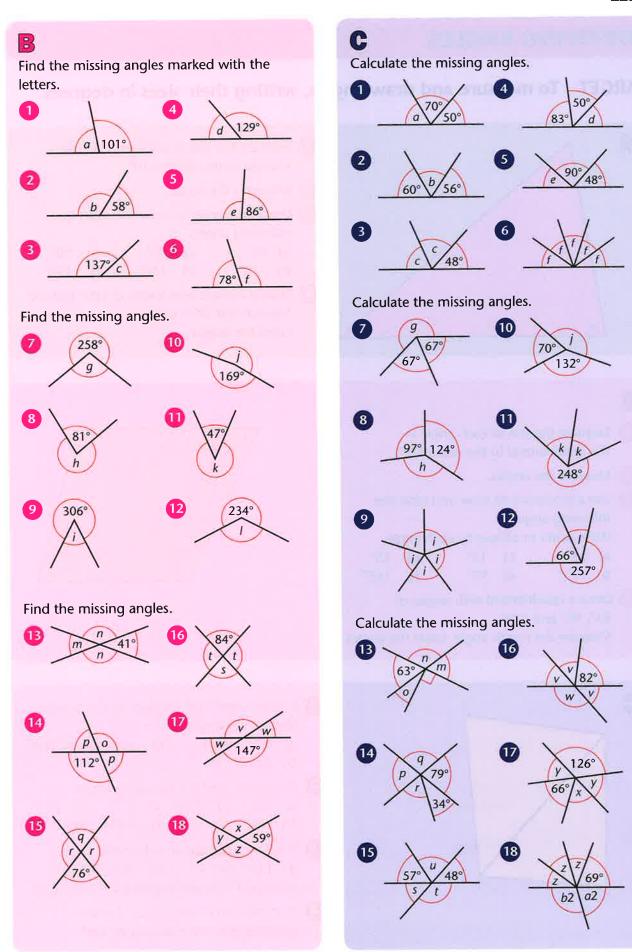

OPPOSITE ANGLES

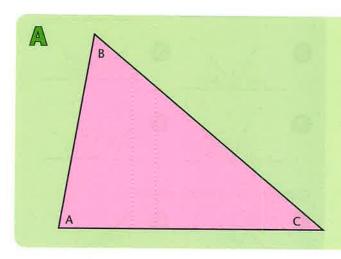

When two straight lines intersect at a point opposite angles are equal.

To measure and draw angles, writing their sizes in degrees.

- Estimate the size of each angle in the triangle to the nearest 10°.
- Measures the angles.
- Use a protractor to draw and label the following angles.
 - a) 80°
- c) 20°
- e) 50°

- **b**) 110°
- d) 170°
- 140° f)
- Draw a triangle with angles of 100° and 40°. Measure the third angle. Label the angles.

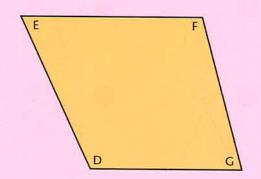

B

- 1 Estimate the size of each angle in the quadrilateral to the nearest 5°.
- Measure the angles.
- Use a protractor to draw and label the following angles.

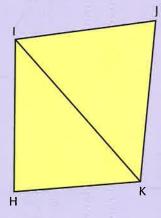

Write acute or obtuse by each angle.

- a) 65°
- 15° c)
- e) 35°

- **b)** 135°
- d) 95°
- f) 165°
- 4 Draw a quadrilateral with angles of 85°, 45° and 125°. Measure the fourth angle. Label the angles.

C

- 1 Estimate and then measure to the nearest degree the angles of:
 - a) triangle HIK
- c) quadrilateral HIJK
- b) triangle IJK
- Draw and label the following angles.
 - a) 72°
- c) 159° e) 57°
- **g)** 224°
- b) 106° d) 23° f) 121°

Measure the fourth angles. Label the angles.

- h) 278°
- Draw a quadrilateral with angles of:

 - a) 117°, 94°, 43° b) 38°, 202°, 67°
- 4) Find the sum of the angles of each quadrilateral. What do you notice?

TARGET To use the properties of rectangles to find lengths and angles.

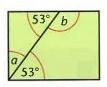

Examples

Find lengths
$$x$$
 and y .

$$x = (3 + 3) \text{ cm} = 6 \text{ cm}$$

$$y = (6 - 4) \text{ cm} = 2 \text{ cm}$$

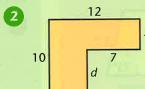

$$a = (90 - 53)^{\circ} = 37^{\circ}$$

$$b = (180 - 53)^{\circ} = 127^{\circ}$$

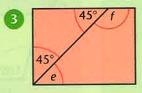

Perimeters are rectilinear. (All lines meet at right angles.) All lengths are in centimetres.

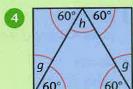

Find the missing lengths, a–d.

1 3 b

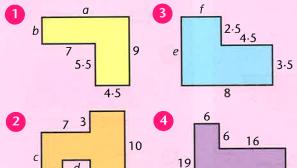

Find the missing angles, e-h.

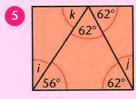

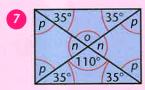

B

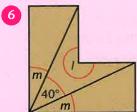

Find the missing lengths and angles.

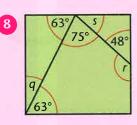

Find the missing angles, i-s.

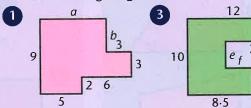

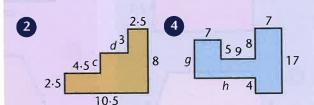

C

Find the missing lengths, a-h.

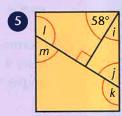

The sum of the angles of:

- a) a triangle is 180°
- b) a quadrilateral is 360°.

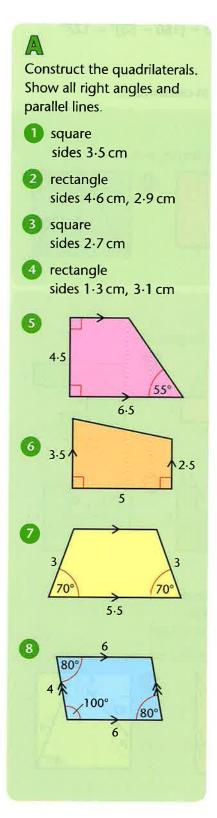

Use these facts to find the missing angles.

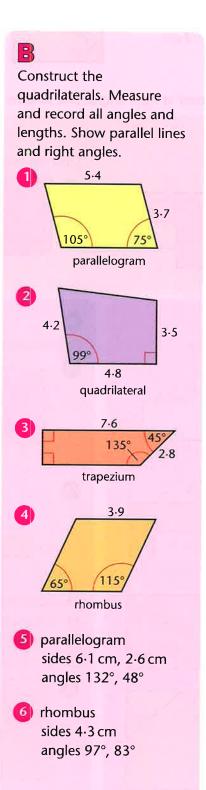

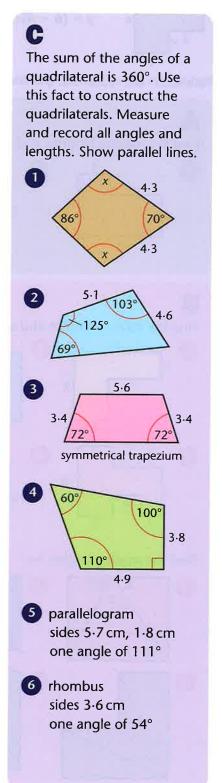

TARGET To measure accurately with both ruler and protractor and to use conventional markings for right angles and parallel lines.

All lengths are in centimetres.

To recognise the properties of the diagonals of quadrilaterals. **TARGET**

DIAGONALS

Diagonal lines go from one vertex of a shape to another. LINES WHICH BISECT

AX = BXCX = DX

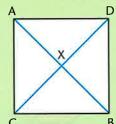

Bisect means cut in half. Lines which bisect cut each other in half.

PERPENDICULAR LINES

Perpendicular lines cross or meet at a right angle.

1) Use squared paper. Draw a square with sides of 3 cm. Draw on the diagonals.

- Measure the diagonals, AB and CD. Are they equal?
- Measure AX and BX. Measure CX and DX. Do the diagonals cut each other in half?
- Use a set square. Do the diagonals cross at a right angle?
- Draw a square with 5 cm sides. Draw on the diagonals. Repeat questions (2) to (4) for this square.
- Investigate the diagonals of rectangles.

- For each of the quadrilaterals predict whether the diagonals:
 - a) are of equal length
 - b) bisect each other
 - c) are perpendicular.

- a) Copy the shapes onto squared paper and draw the diagonals.
 - b) Check your predictions.
 - c) Mark all parallel lines and right angles.
 - d) Name each shape.

C

The following lines are the diagonals of quadrilaterals. For each pair of lines predict the properties of the shape.

- a) Are any pairs of sides equal, parallel or perpendicular?
- b) Are any angles equal?
- c) Is the shape symmetrical? (Dashes show equal lines. Right angles are marked.)

- a) Construct the shapes.
 - b) Check your predictions.
 - c) Mark all the right angles and parallel lines.
 - d) Name the shapes.

TARGET To identify 3-D shapes from 2-D representations.

CURVED EDGES

These 3-D shapes have curved edges.

cone cylinder hemisphere sphere

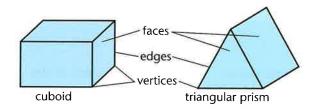

STRAIGHT EDGES

A 3-D shape with straight edges is called a polyhedron.

These shapes are some of the polyhedra.

cube

cuboid square based pyramid triangular based pyramid prisms: triangular pentagonal hexagonal and so on

Look at the shapes A-J.

Write down the letters of all the shapes:

- 1 with curved faces
- with a triangular face or faces
- 3 with curved edges
- Which are polyhedra.

Write down the letter of the shape which has:

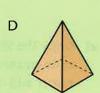

- 8 faces
- 6 6 edges
- 6 vertices
- 8 2 circular faces
- 18 edges
- 00 5 vertices
- Which two shapes each have one circular face?
- Which two shapes each have eight vertices?
- Which two shapes each have five faces?

В

B

Copy and complete by matching the letters of the shapes in Section A to these names.

- 1) ______sphere
- 2 _____ triangular prism
- Square based pyramid
- 4 _____ cone
- cuboid
- 6 _____ triangular based pyramid
- Z cylinder
- 8 _____ cube
- ______ hemisphere
- nexagonal prism
- For each of the six polyhedra listed above, write down the number of faces, edges and vertices it possesses.

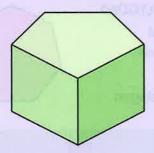

Example

triangular prism 5 faces, 9 edges, 6 vertices

- Selina uses straws to build a 3-D shape. She uses nine lengths. Which shape has she made?
- (B) Hussein makes a 3-D shape by glueing together four flat pieces of card. Which shape has he made?
- Danielle makes a 3-D shape by glueing together six identical flat pieces of card. What shape is each piece of card?
- How many lengths of straw would be needed to build:
 - a) a pentagonal prism
 - b) a pentagonal based pyramid?

C

A prism is a polyhedron with two identical end faces and the same cross-section throughout its length.

- 1 Look at the pentagonal prism. Write down the number of:
 - a) faces
- b) edges
- c) vertices.
- Ahmed says a cuboid is a prism.
 - a) Is he right? Give a reason for your answer.
 - **b)** List all the shapes on page 122 which are prisms.
- This is the end face of a prism.
 - a) How many faces would it have?
 - b) How many edges?
 - c) How many vertices?
- 4 A prism has 12 faces.
 - a) How many edges does it have?
 - b) How many vertices?
- A pyramid has 10 edges.
 - a) How many faces does it have?
 - b) What shape is the base?
- 6 A prism has 24 edges.
 - a) How many vertices does it have?
 - b) What shape is the end face?
- A pyramid has 7 vertices.
 - a) How many faces does it have?
 - b) What shape is the base?

TARGET To distinguish between regular and irregular polygons.

REGULAR POLYGONS all sides equal all angles equal

a regular heptagon

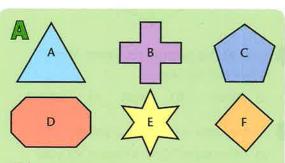

IRREGULAR POLYGONS all sides and all angles not equal

Example

an irregular pentagon

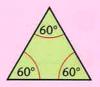

- Give the letter and name of the above shapes which are regular.
- ② Give a reason why each of the above irregular shapes is not regular.
- Use squared paper.
 - a) Draw a quadrilateral with equal angles which is not regular.
 Name the shape.
 - b) Draw a quadrilateral with equal sides which is not regular. Name the shape.

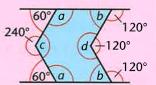

1 An equilateral triangle has angles of 60°. Draw an equilateral triangle with sides 4.5 cm.

2 A regular hexagon has angles of 120°. Draw a regular hexagon with sides 2.5 cm.

- 3 Draw an irregular hexagon which has six 120° angles.
- 4 Find the missing angles a, b, c and d.
- 5 Construct the irregular hexagon shown in blue with all sides 3.2 cm.

 Work out the equal angle x separating each pair of spokes.

- 2 Draw 5 spokes of equal length and with equal angles between them. Join up the ends of the spokes to draw a regular pentagon.
- 3 The angles of your pentagon should be 108°.

 Draw an irregular pentagon with all angles 108°.

- 4 Draw an irregular pentagon with all sides equal.
- 5 Draw a regular pentagon with sides 2.8 cm.
- 6 Use the spokes method to draw a regular polygon with:
 - a) eight sides (octagon)
 - b) nine sides (nonagon)
 - c) ten sides (decagon).

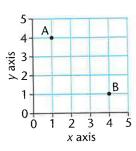

TARGET

To plot co-ordinates, to draw a shape and to predict its position following a reflection.

The position of a point on a grid is given by its x and y co-ordinates.

Examples

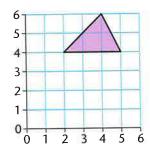

Point A is (1, 4). Point B is (4, 1). Remember: The x co-ordinate always comes first.

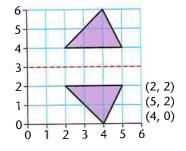

Example

Plot the following points and join up in the order given to form a triangle.

(2, 4) (4, 6) (5, 4) (2, 4)

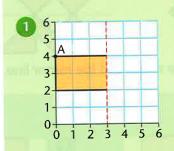

Sketch the reflection of the shape in a mirror line from (0, 3) to (6, 3). Give the co-ordinates of the reflected shape.

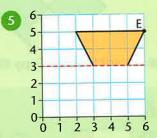

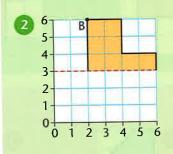

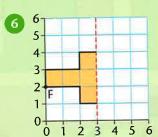

Use squared paper.

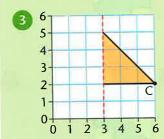

Copy the grid, the shape and the mirror line. Sketch the reflection.

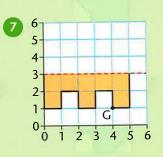

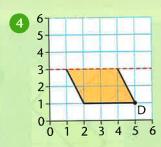

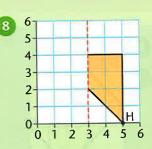

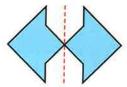

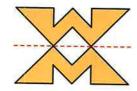

- Give the co-ordinates of points A–H:
 - a) in the above shapes
 - b) in the reflected shapes.

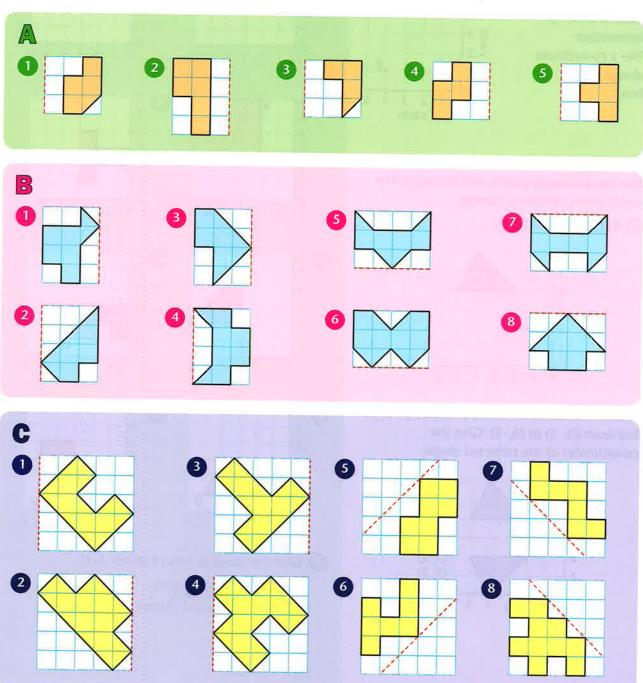

TARGET To identify and sketch the position of a shape following a reflection.

Examples

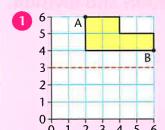

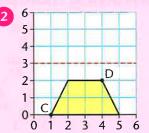

Use squared paper. Copy the shape and the mirror line. Sketch the reflection.

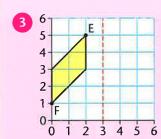

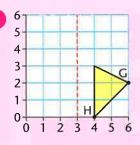

8

Copy the grid, the shape and the mirror line. Sketch the reflection.

- 5 Give the co-ordinates of points A–H:
 - a) in the above shapes
 - b) in the reflected shapes.

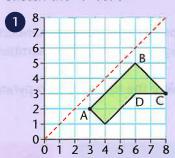

Plot the co-ordinates for each of the following on a 6×6 grid and join them up in the order given to form a shape. Draw the mirror line and sketch the reflection.

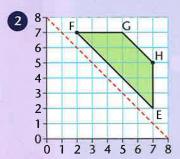

- 6 (3, 4) (1, 6) (4, 6) (6, 4) (3, 4) Mirror line (0, 3) to (6, 3)
- 7 (0, 0) (0, 1) (2, 1) (2, 2) (3, 2) (3, 1) (4, 1) (4, 0) (0, 0) Mirror line (0, 3) to (6, 3)
- (2, 1) (1, 1) (0, 3) (1, 5) (2, 5) (2, 1) Mirror line (3, 0) to (3, 6)
- 9 (4, 6) (6, 4) (5, 2) (4, 2) (4, 6) Mirror line (3, 0) to (3, 6)
- (0, 6) (4, 6) (3, 5) (3, 4) (1, 4) (1, 5) (0, 6) Mirror line (0, 3) to (6, 3)

C

Copy the grid, the shape and the mirror line.

Sketch the reflection.

- 3 Give the co-ordinates of points A-H:
 - a) in the above shapes
 - b) in the reflected shapes.

Plot the co-ordinates on an 8×8 grid and join them up in the order given to form a shape. Draw the mirror line and sketch the reflection.

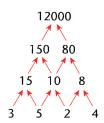

- 4 (3, 2) (6, 5) (7, 4) (7, 1) (4, 1) (3, 2) Mirror line (0, 0) to (8, 8)
- (1, 2) (1, 6) (3, 6) (5, 8) (5, 6) (1, 2) Mirror line (0, 0) to (8, 8)
- 6 (2, 8) (8, 8) (8, 2) (6, 4) (6, 6) (4, 6) (2, 8) Mirror line (0, 8) to (8, 0)
- (1, 1) (1, 3) (0, 4) (0, 6) (1, 6) (6, 1) (6, 0) (4, 0) (3, 1) (1, 1) Mirror line (0, 8) to (8, 0)

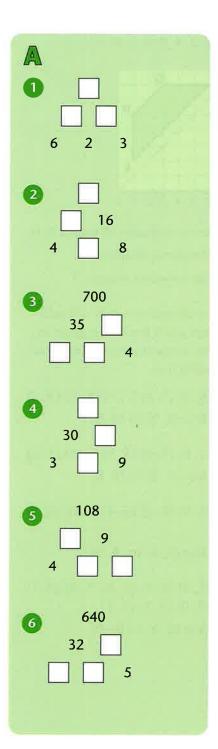

TARGET To solve number puzzles involving multiplication and division.

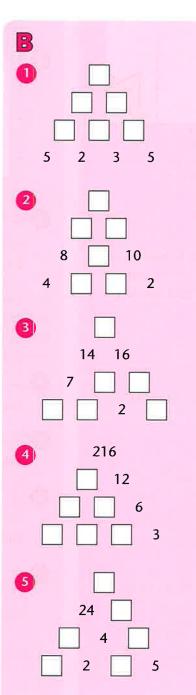

Example

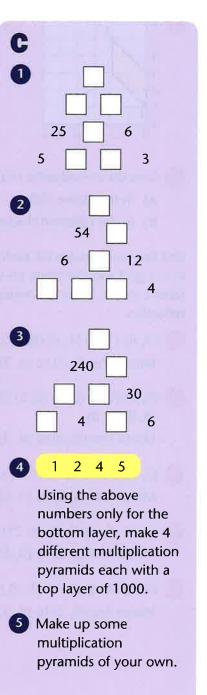

In a multiplication pyramid pairs of numbers are multiplied together to make the number above them.

Copy and complete the multiplication pyramids.

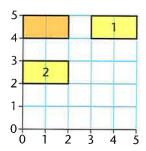

TARGET To represent the position of a shape after a translation.

To translate a shape means to slide it into a new postion.

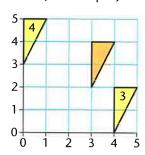

Examples

Translate the orange shapes as follows:

- R3 (right 3 squares)
- D2 (down 2 squares)

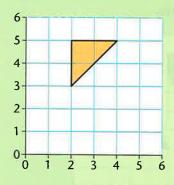

- R1 D2 (Right 1 Down 2)
- L3 U1 (Left 3 Up 1)

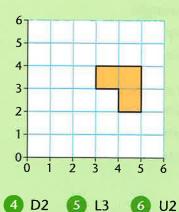

Copy the grids and the shapes. Translate each shape 3 times.

- 1 L2
- 2 D3
- 6

R2

- 8
- 1 Copy the grid in Section A.
 - a) Plot these points. (1, 6) (2, 4) (3, 6). Join them up to draw a triangle.
 - b) Translate the triangle R2. Give the co-ordinates of the new position.
 - c) Translate the original triangle D4. Give the new co-ordinates.
- 2 Draw a new grid. Plot these points and join them up in the order given.
 - (5, 0) (5, 2) (6, 3)

(6, 1)(5, 0)

Translate the quadrilateral:

- a) U3
- b) L2.

Give the co-ordinates of the new positions.

- C
- Draw a new grid.
 - a) Plot these points and join them up to draw a triangle. (1, 2) (2, 4) (3, 1)
 - b) Translate the triangle R2 D1.
 Give the co-ordinates of the new position.
 - c) Translate the original triangle L1 U2. Give the new co-ordinates.
- 2 Draw a new grid. Plot these points and join them up in the order given.

(2, 4) (2, 5) (4, 3)

(3, 2)(2, 4)

Translate the quadrilateral:

- a) R2 U1
- **b)** L2 D2.

Give the co-ordinates of the new positions.

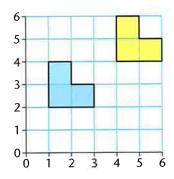

TARGET

To identify and represent the position of a shape afer a translation.

To translate a shape means to slide it into a new position. The shape stays the same and is not rotated (turned).

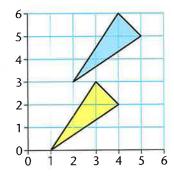

Examples

Translate the blue hexagon Right 3 Up 2. Give the co-ordinates of the new position.

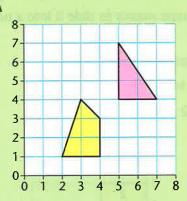

(4, 4) (4, 6) (5, 6) (5, 5) (6, 5) (6, 4)

Translate the blue triangle Left 1 Down 3.
Give the co-ordinates of the new position.

(1, 0) (3, 3) (4, 2)

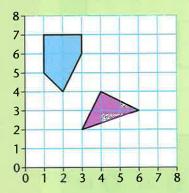

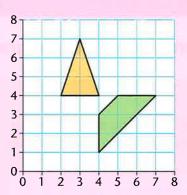

- Copy the grid and the triangle.

 Translate the triangle:
 - a) Left 4 squares
 - b) Down 3 squares.
- 2 Copy the grid and the quadrilateral.

 Translate the quadrilateral:
 - a) Right 2 squares
 - b) Up 4 squares.

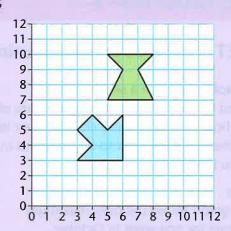

- 3 Copy the grid and the triangle.
 Translate the triangle:
 - a) Left 3 squares
 - b) Up 2 squares.
- Copy the grid and the pentagon. Translate the pentagon:
 - a) Right 3 squares
 - b) Down 4 squares.

- 1 Copy the grid and the triangle.
 Translate the triangle:
 - a) Left 2 Down 3
 - b) Right 4 Up 1
 - c) Right 3 Down 4.
- Copy the grid and the trapezium.
 Translate the trapezium:
 - a) Left 4 Down 1
 - b) Right 1 Up 4
 - c) Left 3 Up 3.
- 3 Draw a new grid. Plot these co-ordinates and join them up in the order given. (4, 6) (6, 6) (7, 4) (5, 4) (4, 6)
- Translate the parallelogram:
 - a) Left 2 Up 2
 - b) Right 1 Down 3
 - c) Left 3 Down 4.
- 5 Draw a new grid. Plot these co-ordinates and join them up in the order given.(3, 1) (1, 3) (2, 4) (4, 4) (4, 2) (3, 1)
- **6** Translate the pentagon:
 - a) Right 3 Up 4
 - b) Right 4 Down 1
 - c) Left 1 Up 3.
- Give the co-ordinates of the new positions of the pentagon.

C

- 1 Copy the grid and the hexagon. Translate the shape:
 - a) Left 3 Up 2
 - b) Right 2 Down 4
 - c) Left 5 Down 6.
- 2 Copy the grid and the heptagon. Translate the shape:
 - a) Right 4 Up 2
 - b) Left 2 Up 5
 - c) Right 6 Down 2.
- 3 Draw a new grid. Plot these co-ordinates and join them up in the order given.

(3, 7) (5, 9) (6, 8) (5, 7) (6, 6) (5, 5) (3, 7)

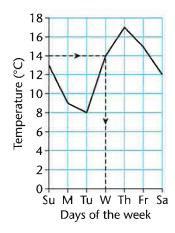

- 4 Translate the shape:
 - a) Right 5 Up 2
 - b) Left 3 Down 4
 - c) Right 2 Down 3.
- 5 Draw a new grid. Plot these co-ordinates and join them up in the order given. (6, 4) (7, 7) (8, 6) (9, 7) (8, 4) (7, 5) (6, 4)
- 6 Translate the shape:
 - a) Left 4 Up 5
 - b) Right 2 Up 4
 - c) Left 6 Down 2.
- Oive the co-ordinates of the new positions of the hexagon which is not symmetric.

TARGET To solve problems using information presented in a line graph.

A line graph consists of a series of points connected by straight lines. Line graphs are often used to show how something changes over time. To read the graph we need to locate points in relation to both axes.

Examples

This line graph shows the daily maximum temperature for one week in October.

- On which day was the temperature 14°C?

 Answer Wednesday (see graph)
- On which day was the lowest temperature recorded?

Answer Tuesday

- How much higher was the temperature on Thursday than on Friday?

 Answer $2^{\circ}C(17^{\circ}C 15^{\circ}C)$
- On which day was there the largest fall in temperature?

Answer Monday (4°C lower than Sunday)

- How much lower was the temperature on Saturday than on Friday? Answer 3°C (15°C – 12°C)
- On how many days was the temperature below 10°C?

Answer 2 (Monday, Tuesday)

A

This line graph shows the daily maximum temperature for the first 12 days of March.

- On which day was there:
 - a) the highest temperature
 - b) the lowest temperature?
- 2 What was the temperature on:
 - a) 6th March
 - b) 12th March?
- On which day was the temperature:
 - a) 6°C
 - b) 10°C?
- On which two days was the temperature 8°C?
- S How much higher was the temperature on the 8th than on the 9th?
- 6 How much lower was the temperature on the 5th than on the 6th?
- On which day was there:
 - a) the largest rise in temperature
 - b) the largest fall in temperature?
- On how many days was the temperature:
 - a) below 10°C
 - b) above 12°C?

B

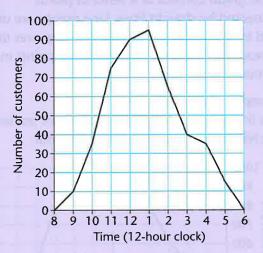

This graph shows the number of boxes of cornflakes a supermarket has in stock recorded each morning before the store opens.

- 1 On which day is there a delivery of new stock?
- 2 How many boxes are there in stock at the start of:
 - a) 7th April
 - b) 5th April?
- 3 At the start of which day was the number of boxes in stock:
 - a) 450
 - b) 850?
- 4 How many more boxes were in stock on the 1st than on the 2nd?
- 5 How many fewer boxes were in stock on the 7th than on the 8th?
- 6 How many boxes were sold on:
 - a) the 3rd
 - **b)** the 9th?
- 7 How many more boxes were sold on the 10th than on the 11th?
- 8 How many fewer boxes were sold on the 5th than on the 6th?
- One hundred boxes were sold on the 7th. How many boxes were delivered?

C

A High Street shop is open from 8 am to 6 pm on a Saturday. This line graph shows the number of customers in the shop recorded at hourly intervals.

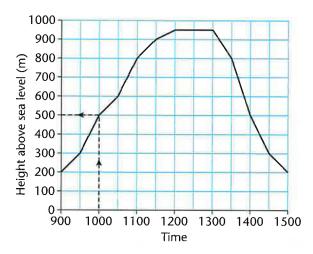

- 1 When was the shop most crowded?
- 2 How many customers were in the shop at:
 - a) 2 pm
 - b) noon?
- 3 At what time were there:
 - a) 40 customers
 - b) 75 customers?
- 4 How many more customers were in the shop at 4 pm than 5 pm?
- 5 How many fewer customers were in the shop at 9 am than 10 am?
- 6 Estimate the number of customers in the shop at:
 - a) 10.30 am
 - **b)** 1.30 pm?
- 7 In which hour was there:
 - a) the largest rise in customers
 - b) the largest fall in customers?
- 8 Between 11 am and noon 117 customers entered the shop. How many left?
- 9 Between 3 pm and 4 pm 56 customers left the shop. How many entered?

TARGET To solve problems using information presented in a line graph.

A line graph consists of a series of points connected by straight lines. Line graphs are often used to show how something changes over time. To read the graph we need to locate points in relation to both axes.

Examples

This line graph shows the height above sea level of a hill walker measured every half hour.

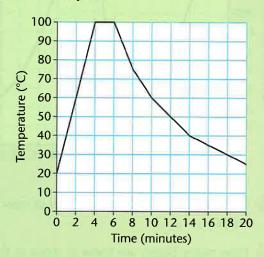

- At what time does he begin his walk? Answer 09:00
- How high is he at 10:00?
 Answer 500 m (shown on graph)
- How much higher is he at 11:00 than 10:00?
 Answer 300 m (800 m - 500 m)
- How high is the hill?

 Answer 950 m
- How long is he above 800 m?
 Answer $2\frac{1}{2}$ hours (11:00 to 13:30)

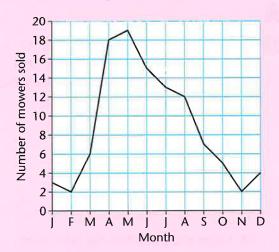

This line graph shows the temperature of water being heated and then left to cool recorded every 2 minutes.

- What is the temperature of the water before it is heated?
- 2 How long does it take the water to reach boiling point?
- 3 How much does the temperature rise in the first two minutes of heating?
- Mow long is the water boiling?
- Mow much does the temperature fall in the first two minutes of cooling?
- 6 As the water cooled at what time was the temperature:
 - a) 50°C
 - b) 35°C?
- What was the temperature of the water after:
 - a) 20 minutes
 - b) 8 minutes?
- 8 At which two times was the temperature 60°C?

B

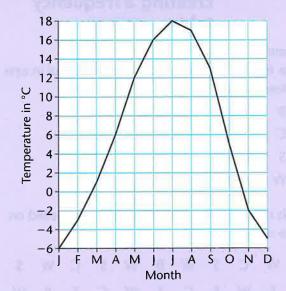

This graph shows the monthly sales of lawnmowers at a garden centre.

- 1 In which months were:
 - a) most mowers sold
 - b) fewest mowers sold?
- 2 How many mowers were sold in:
 - a) March
 - b) August?
- In which month were:
 - a) 4 mowers sold
 - b) 15 mowers sold?
- In which month was there:
 - a) the largest rise in sales
 - b) the largest fall in sales?
- 5 How many more mowers were sold in October than in November?
- 6 How many fewer mowers were sold in February than in May?
- 7 How many fewer mowers were sold in the first three months of the year than in the next three months?
- 8 In how many months were there:
 - a) more than 10 mowers sold
 - b) less than 5 mowers sold?
- 9 How many mowers were sold in the year altogether?

C

This graph shows the average daily maximum temperature recorded in Anchorage, Alaska, in one year.

- 1 In which month was the highest temperature recorded?
- What was the lowest temperature?
- 3 In which month was the temperature:
 - a) 17°C
 - b) -3°C?
- 4 What was the temperature in:
 - a) June
 - b) December?
- 5 In which month was there:
 - a) the largest rise in temperature
 - b) the largest fall in temperature?
- 6 How much higher was the temperature:
 - a) in October than November
 - b) in September than December?
- Mow much lower was the temperature:
 - a) in April than May
 - b) in January than July?
- In which months was the temperature:
 - a) above 10°C
 - b) below 0°C?

TARGET To organise data by creating a frequency table.

Example

The 60 children in Year 5 travel to school in one of four ways:

- B Bike
- C Car
- S School bus
- W Walk

This is how each of the 60 children travelled on one day.

W	C	S	W	В	W	S	C	W	S
S	W	S	C	S	W	C	S	В	W
C	W	В	S	C	W	S	W	W	C
W	S	C	W	S	W	В	C	S	W
В	W	S	В	W	C	S	W	C	S
S	C	W	S	C	В	S	W	S	W

A tally chart can be completed by counting in groups of five.

Travel Method	Tally
Bike	##11
Car	W W W
School Bus	
Walk	

The data can be presented in a frequency table.

Travel Method	Number of children
Bike	7
Car	13
School Bus	19
Walk	21
Total	60

The children in Class 5 were asked to choose a flavour of yogurt to take on a trip for lunch time. The flavours available were hazelnut, orange, peach and strawberry. These are the choices.

S	Р	_ H	0	Р	S	Н
Н	0	Р	S	Н	0	Р
P	Н	S	Р	Н	Р	0
S	Р	0	Н	S	Р	Н

a) Copy and complete the tally chart.

<u>Flavour</u>	<u>Tally</u>
hazelnut	
orange	
peach	
strawberry	

- b) Present the data in a frequency table.
- 2 These are the ages of the 36 children in the school chess club.

a) Copy and complete the tally chart.

<u>Age</u>	Tally
8	1111
9	
10	
11	

b) Present the data in a frequency table.

B

1 A football team played 50 matches in one season. These are the number of goals the team scored in each match.

2 0 2 2 0 2 0 3 3 2 1 2 0 3 0 2 3 0 2 2

- a) Make a tally chart to find the total for each number of goals scored.
- b) Present the data in a frequency table.
- c) Check that the sum of the totals is 50.
- 2 A shop sells baseball caps in four different colours: black, red, white and yellow. In one day the following caps were sold.

В R Υ R Υ W В W W R Υ W В R W В W R В Υ W Υ R Υ В W R В W W R W Υ

- a) Make a tally chart to find the total for each colour of cap.
- b) Present the data in a frequency table.
- c) Check that the sum of the totals matches the number of caps sold.

C

1 The depth of a river was recorded each week for a year. These are the results rounded to the nearest metre.

5 2 3 3 3 3 2 2 3 2 3 3 3 2 2 2 5 3 3 3 5

- a) Make a tally chart to find the total of weeks for each depth.
- b) Check that the sum of the totals matches the number of weeks.
- c) Present the data in a frequency table.
- 2 The 60 employees of a firm voted to choose the restaurant they would go to for their annual Staff Meal.

 The five restaurants large enough to cater for the group were Chinese, English, French, Italian and Thai.

 The votes were:

- a) Make a tally chart to show the total of votes for each restaurant.
- **b)** Check that the sum of the totals matches the number of employees.
- c) Present the data in a frequency table.

TARGET To read and interpret information in a table.

This table shows the planets in our solar system in order of distance from the Sun.

Planet	Number of	Year length	h Day length (Earth	*Diameter	Temperature	
Flatiet	moons	(Earth days/years)	hours\days)	(miles)	Max. (°C)	Min. (°C)
Mercury	0	88 days	59 days	3031	430	-184
Venus	0	225 days	243 days	7521	464	464
Earth	1 -	365 days	24 hours	7926	57	-89
Mars	2	687 days	24.6 hours	4222	20	-120
Jupiter	67	11.9 years	9⋅8 hours	88729	-110	-110
Saturn	62	29.5 years	10⋅2 hours	74 600	-140	-140
Uranus	27	84.1 years	17.9 hours	32 600	-197	-197
Neptune	13	164.8 years	19.1 hours	30 200	-204	-204

^{*}The diameter of a planet is a straight line from one side to the opposite side passing through the centre of the planet.

Examples

What is the diameter of Mars? Answer 4222 miles

Which planet has days 10.2 hours long? Answer Saturn

- How many moons does Mars have?
- 2 How long is a year on Mercury?
- What is the diameter of the Earth?
- 4 What is the temperature on Saturn?
- Mow long is a day on Uranus?

- Which planet has a maximum temperature of 20°C?
- Which planet has 67 moons?
- 8 Which planet has a year 29.5 years long?
- Which planet has a diameter of 30 200 miles?
- 10 Which planet has a day 59 times longer than a day on Earth?

B

Look at the table on page 138.

- Which planets are moonless?
- 2 In the table year lengths are rounded to the nearest whole day. Give the actual length of Earth's year correct to 2 decimal places.
- Which planet is closest to the Earth:
 - a) in size (diameter)
 - b) in length of day
 - c) in length of year?
- Which planet is:
 - a) furthest from the Sun
 - b) closest to the Sun?

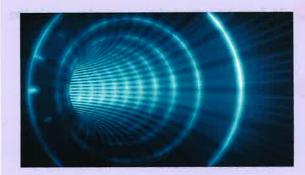

- 5 Which planet is:
 - a) coldest
 - b) hottest?
- Which planet has:
 - a) the longest day
 - b) the shortest day?
- Which two planets have a diameter approximately four times that of Earth?
- 8 What is the difference between the maximum and minimum temperatures:
 - a) on Mercury
 - b) on Earth
 - c) on Mars?
- 9 How many planets have:
 - a) a shorter year than Earth
 - b) a shorter day than Earth?

C

Look at the table on page 138.

- 1 Which planet has a day longer that its year?
- What is the difference in maximum temperature between the hottest planet and the coldest planet?
- 3 Which planet takes the least time to orbit the Sun?
- 4 How much longer does it take Mars than Earth to:
 - a) rotate on its axis
 - b) orbit the Sun?
- **S** Give the total number of moons in our solar system.
- 6 On which planets would it be impossible to drink a glass of water? Give an explanation for your answer.
- List the planets in order of:
 - a) size, largest first
 - b) length of day, shortest first
 - c) minimum temperature, lowest first.
- 8 In 2046 you are the first astronaut to make use of space/time wormhole portal technology to explore the planets orbiting a distant star. Give information about the planets of that solar system in a table.

TARGET To complete, read and interpret information in tables.

Example

At a multiscreen cinema there are four performances daily at each of the five screens. This table shows the size of audience for each performance on one Saturday.

Screen	Performance					
Screen	3 pm	5 pm	7 pm	9 pm		
1	240	180	70	20		
2	190	210	250	110		
3	80	70	120	90		
4	140	170	130	80		
5	50	90	160	230		

- What was the audience in Screen 2 at 9 pm? Answer 110
- Which performance in Screen 1 had an audience of 180?
 Answer 5 pm
- What was the combined audience for the first two performances in Screen 4?

 Answer 310 (140 + 170)
- Which performance had an audience of 120?

 Answer 7 pm performance in Screen 3
- At 7 pm how many fewer people were in the audience in Screen 1 than in Screen 2? Answer 180 (250 – 70)
- 6 How much larger was the audience in Screen 5 for the 9 pm performance than the 7 pm?

Answer 70 (230 − 160)

At regular intervals in the Autumn Term the children in a class were given 60 mental calculations and five minutes to answer as many as they could. These are the scores of the children on one table.

Name	Test 1	Test 2	Test 3	Test 4
Kay	18	28	26	35
Gill	28	29	37	42
Zain	26	34	41	53
Lori	19	21	25	37
Ruja	25	27	43	44
Tim	23	22	34	39

- How many did Tim score:
 - a) in Test 1
 - b) in Test 4?
- 2 Who scored 34:
 - a) in Test 2
 - b) in Test 3?
- Who had the highest score:
 - a) in Test 1
 - b) in Test 3?
- In which test did:
 - a) Lori score 37
 - b) Gill score 37?
- In which Test did Kay make her greatest improvement?
- 6 How many more was scored in Test 4 than Test 1 by each of the children?

B

This table shows the number of bottles of milk sold in a supermarket.

Size	Red top	Green top	Blue top
1 litre	82	49	54
2 litres	46	78	39
3 litres	17	25	32

- 1 How many of these bottles were sold?
 - a) 1 litre bottles of red top
 - b) 2 litre bottles of blue top
 - c) 3 litre bottles of green top
- 2 How many more 2 litre bottles were sold of green top than red top?
- 3 How many fewer 1 litre bottles were sold of green top than blue top?
- 4 How many more 2 litre bottles of red top were sold than 3 litre bottles of red top?
- 6 How many fewer 2 litre bottles of blue top were sold than 1 litre bottles of blue top?
- 6 Give the total number of 3 litre bottles sold.
- Give the total number of blue bottles sold.
- 8 Copy and complete the table.

Type of milk	Number of bottles sold	Number of litres sold
red top		
green top		
blue top		

C

This table shows the number of cars entering and leaving the 3 levels of a car park hourly after its 08:00 opening. Cars entering are shown in black. Cars leaving are shown in red.

Hour	Level 1		Level 2		Level 3	
1st	54	0	12	0	5	0
2nd	35	13	61	2	18	0
3rd	59	52	44	37	31	3
4th	48	65	25	39	26	29

- 1 How many cars entered the car park in:
 - a) the 1st hour
- b) the 2nd hour?
- 2 In the first two hours how many cars entered:
 - a) Level 1
- b) Level 3?
- 3 How many cars left the car park in:
 - a) the 2nd hour
- b) the 4th hour?
- 4 How many more cars left Level 1 than Level 2 in:
 - a) the 3rd hour
- b) the 4th hour?
- In the second hour how many more cars entered Level 2 than:
 - a) Level 1
- **b)** Level 3?
- 6 At the end of the second hour how many cars were on:
 - a) Level 2
- b) Level 1?
- Copy and complete the table showing the number of cars on each level at the end of each hour.

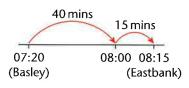

Time	Number of cars					
	Level 1	Level 2	Level 3			
09:00						
10:00	i i i					
11:00						
12:00			1			

TARGET To read and interpret information in timetables.

	-				
	BUS 1	BUS 2	BUS 3	BUS 4	BUS 5
Ashwell	07:00	08:35	10:50	13:25	16:20
Basley	07:20	09:00	11:10	13:45	16:45
Cowthorpe	07:35	09:15	11:25	14:05	17:05
Downford	07:50	09:25	11:35	14:15	17:20
Eastbank	08:15	09:45	11:55	14:35	17:45
Foxhill	08:40	10:05	12:15	15:00	18:05

Example

How long is the journey on Bus 1 from Basley to Eastbank?

Answer 55 minutes

1 At what time does
Bus 1 leave Ashwell?

At what times does Bus 1 stop at:

- 2 Cowthorpe
- Bastbank
- 4 Foxhill?

How long is the journey on Bus 1 from:

- Shwell to Cowthorpe
- 6 Eastbank to Foxhill
- Basley to Downford?

How long is the journey on Bus 4 from:

- 8 Ashwell to Basley
- Downford to Foxhill
- Owthorpe to Downford?
- Nathan is meeting a friend at Cowthorpe at 8:00 am. He takes Bus 1 from Ashwell. How long will he have to wait at Cowthorpe?

8

At what time would you reach:

- Basley on Bus 3
- Eastbank on Bus 5
- Cowthorpe on Bus 2
- Foxhill on Bus 1
- Oownford on Bus 4
- 6 Eastbank on Bus 3?

How long is the journey:

- on Bus 2 from Ashwell to Cowthorpe
- 8 on Bus 5 from Downford to Eastbank
- on Bus 3 from Cowthorpe to Downford
- on Bus 4 from Basley to Foxhill?
- Which bus would you take from Ashwell if you need to be at Foxhill by:
 - a) 4:00 pm
 - b) 11:00 am
 - c) 6:00 pm?

C

- 1 How long does each bus take to travel from Ashwell to Cowthorpe?
- 2 How long does each bus take to complete the journey from Ashwell to Foxhill?

Which bus should someone take from Ashwell if they need to be:

- 3 in Cowthorpe at 11:00 am
- 4 in Foxhill at 1:30 pm
- in Downford at 9:00 am
- 6 in Eastbank at 2:00 pm?

At what time would you catch a bus at Basley to be at:

- Eastbank at 10:00 am
- 8 Downford at 5:30 pm
- Downford at 2:30 pm
- Cowthorpe at 2:00 pm?

TARGET To practise using a timetable to find information.

Newcastle	08:15	09:53	11:27	=	14:02
Darlington	08:48	10:26	12:00	±	14:35
York	09:27	11:05	12:39	13:58	15:14
Leeds	09:55	11:33	13:07	14:26	15:42
Huddersfield	10:16	11:52	13:26	14:45	16:01
Manchester	10:54	12:30	14:02	15:23	16:39
Warrington	=	12:53	-	15:46	-
Liverpool	11:31	13:08	=-	16:04	17:16

Example

How long does it take the 14:35 from Darlington to reach York?

Answer 39 minutes

- 1 How long does it take the 08:15 from Newcastle to reach Darlington?
- 2 At how many stations does the 14:02 from Newcastle stop?
- 3 At what time does the 11:27 from Newcastle reach:
 - a) York
 - b) Manchester?
- 4 If you had to be in Liverpool by 12:30 which train would you catch from Newcastle?
- 5 You arrive at Newcastle at 11:05. How long do you have to wait for the next train to Leeds?
- 6 The 09:53 from
 Newcastle runs 10
 minutes late. At what
 time will it reach:
 - a) Huddersfield
 - b) Warrington?

00

- 1 How long does it take the 09:53 from Newcastle to travel to:
 - a) Darlington
 - b) Leeds
 - c) Liverpool?
- 2 At how many stations does the 15:14 from York stop before it reaches Liverpool?
- At what time does the 10:26 from Darlington reach Warrington?
- 4 If you had to be in Manchester by 3:00 pm which train would you catch from Leeds?
- 3 You arrive at Newcastle at 10:45. How long do you have to wait for the next train to Huddersfield?
- 6 The 08:15 from Newcastle runs 15 minutes late. At what time will it reach:
 - a) Manchester
 - b) Liverpool?

C

- 1 How long does it take the 13:58 from York to travel to:
 - a) Huddersfield
 - b) Liverpool
 - c) Manchester?
- 2 At what time does the 11:33 from Leeds reach Manchester?
- 3 If you had to be in Huddersfield by 2:00 pm which train would you catch from Darlington?
- 4 You arrive at Newcastle at 13:26. How long do you have to wait for the next train to Leeds?
- 5 You catch the 11:27 from Newcastle. How long do you have to wait at Manchester for the connection to Liverpool?
- 6 The 09:27 from York runs 46 minutes late. At what time will it reach Liverpool?

Write in words.

- 1 80 026
- 429 608
- 2 307 400
- **6** 150.009
- **63** 791 005
- 97 301.2
- **200 873**
- 8 6605.04

Write down the value of the underlined digit.

- **2** 31 728
- **1** 323 8<u>6</u>5
- 2105⋅19

- **10** 850 <u>9</u>46
- **4** 9<u>4</u>7 261
- **1** 78⋅05<u>3</u>

- 19<u>2</u> 387
- **1** 89 632
- 60 492.6

- **1** <u>5</u>06 490
- **1** 765 170
- **20** 4513.08

Write these numbers in order, starting with the smallest.

- **21** 2209 2902 2290 2099
- 20 116 011 61 606 66 016 110 611
- 23 575 527 557 255 577 255 552 775
- 23 393 344 349 439 344 993 349 399

What number do you reach? Count on

- **25** six 1000s from 705 340
- 26 four 10 000s from 183 019
- nine 100s from 372 653
- 28 seven 1000s from 597 428

Count back

- eight 10 000s from 256 179
- 00 five 100s from 819 036
- seven 1000s from 905 294
- four 10 000s from 634 807

Round to the nearest:

100

1000

- 2392
- 521 368

- **48** 009
- **43** 92 547
- 462 836
- 4 169 025
- 853 742

Round to the nearest 100 and estimate.

- **49** 7462 + 3827
- **3** 5864 × 4
- **50** 12937 + 5593
- **3629** × 7
- § 8253 2446
- **5073** ÷ 3
- **2** 20 384 4871
- **6** 17954 ÷ 5

Write in Arabic numbers.

- **1** DIX
- **3** DCCXXIII
- **@** CXCIV
- **60** CCLVII
- OCCCLXXIX
- **60** CMLXXX
- CDXLVIII

Write in Roman numerals.

- 617
- **3** 754
- **371**

- 66 975
- **208**
- 403

- **6** 562
- **7** 130
- **7**685

- **63** 496
- 2 829
- **7**6 999

Write in order, smallest first.

- $\frac{2}{3}, \frac{1}{3}, \frac{1}{6}, \frac{1}{2}$
- $\frac{1}{2}, \frac{4}{5}, \frac{7}{10}, \frac{2}{5}$
- $\frac{5}{8}$, $\frac{3}{8}$, $\frac{3}{4}$, $\frac{1}{2}$
- $\frac{2}{3}$, $\frac{1}{4}$, $\frac{7}{12}$, $\frac{5}{12}$

Write as mixed numbers.

- $\frac{43}{10}$

Write as improper fractions.

- $\frac{1}{1}$ $4\frac{2}{5}$
- $\frac{1}{2}$ $5\frac{2}{3}$
- $\frac{1}{10}$ $5\frac{7}{8}$
- $6\frac{1}{4}$
- $\frac{1}{1}$ $2\frac{4}{11}$
- $\frac{15}{12}$
- $\frac{16}{6}$ 3 $\frac{1}{6}$
- $\frac{20}{0}$ 3 $\frac{4}{0}$

Work out

- $\frac{2}{6} + \frac{1}{12}$ $\frac{3}{4} \frac{7}{12}$
- $\frac{1}{3} + \frac{5}{12}$ $\frac{11}{12} \frac{1}{6}$
- $\frac{3}{4} + \frac{5}{8}$ $\frac{7}{8} \frac{1}{2}$
- $\frac{1}{2} + \frac{7}{10}$ $\frac{28}{5} + \frac{3}{10}$

Work out

- $29 \ 6\frac{4}{7} \times 2 \ 33 \ 3\frac{2}{3} \times 6$

- $30 \ 4\frac{3}{4} \times 3 \qquad 30 \ 7\frac{3}{5} \times 2$
- 3 $1\frac{5}{9} \times 8$ 3 $1\frac{8}{11} \times 5$
- $\frac{32}{10} \times 4$ $\frac{36}{8} \times 4$

Work out, writing remainders as fractions.

- $\frac{3}{8}$ of 48
- $\frac{1}{10}$ of 74
- $\frac{4}{5}$ of 60 $\frac{1}{4}$ of 39
- $\frac{5}{6}$ of 54 $\frac{1}{3}$ of 17
- $\frac{2}{9}$ of 63
- $\frac{4}{7}$ of 58

Write as a decimal.

- $\frac{49}{100}$ 27 $\frac{65}{100}$
- $\frac{573}{1000}$
- $\frac{47}{10}$ 13 $\frac{2}{10}$

Write as a mixed number.

- **3** 2.408
- **670** 0.83
- **54** 0.76
- **53** 4·06
- **55** 0.015
- **53** 0.007
- **56** 6·1
- **60** 9.309

Give the value of the underlined digit.

- **氦** 1⋅2<u>5</u>1
- **6**335⋅<u>4</u>8
- **62** 0.96
- 660 3.014
- **63** 8.5
- **67** 12.7
- <u>64</u> 0.63<u>2</u>
- **68** 0.02<u>6</u>

Write < or > in the box.

- **69** 0⋅37 0.317
- **20** 0.828 0.882
- **1.16** 0.661
- **22** 0·054 | 0·14

Copy and complete.

- **7**3 0⋅52 + |
- **74** 0·75 + |
- | = 0.09
- | = 0.36
- 77 4.5 + = 5.2
- + 0.8 = 3.7
- **7** 7⋅3 − = 6⋅8
- -0.9 = 1.2

Write as a percentage.

- **85** 0⋅27
- **86** 0.4
- $\frac{3}{4}$
- <u>₿</u> 0.06
- 84 9
- 88 1.0

Write as:

- a) a fraction in its lowest terms
- b) a decimal.
- **839** 47%
- **23** 31%
- **25**%
- **20** 70%
- **211** 60%
- 96%
- **22** 8%
- 36 50%

Find:

- 25% of £7
- **28** 10% of 4.9
- 30% of £120
- 00 75% of 5

Copy and complete.

- 1 m = $+ 0.35 \, \text{m}$
- 2 1 m = 1 + 0.71 m
- 3 $1 \text{ km} = 0.48 \text{ km} + \Box$
- 4 1 km = 0.63 km +
- $5 \pm 1 \boxed{} = \pm 0.84$
- 6 £1 = £0.09
- 7 1 kg 0.57 kg =
- 8 1 kg − 0·12 kg =

Write the answer only.

- **9** 0·19 m × 1000
- **10** 0.058 litres × 10
- 100 2.06 km × 100
- **1** 7.034 kg × 1000
- 16 m ÷ 100
- 1000 82 litres ÷ 1000
- 15 4.7 km ÷ 10
- 100 € 100 to 10

Copy and complete. (≈ means in approximately equal to)

- **1** 6 inches ≈ cm
- 3 feet ≈ ___cm
- 19 5 yards ≈ ___m
- 20 100 miles ≈ km
- 20 8 oz ≈ 0
- 22 5 kg ≈ lb
- 2 pints ≈ litres
- \bigcirc 10 gallons ≈ \bigcirc litres

Write the measurement shown by each arrow.

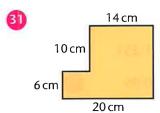

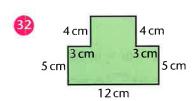

For each shape find:

- a) the area
- b) the perimeter.
- rectangle sides 16 cm, 8 cm
- square sides 20 cm
- rectangle sides 50 m, 30 m
- square sides 14 m

For each shape find:

- a) the perimeter
- b) the area.

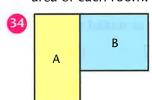

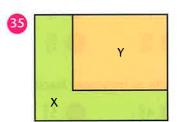

A square has an area of 400 m². What is its perimeter?

The floor plans of these rooms are drawn to a scale of 1:1000 (1 mm shows 1 m).

For each plan work out:

- a) the area of each room
- **b)** the difference in the area of each room.

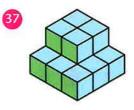

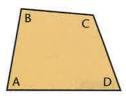

For each shape find:

- a) how many 1 cm³ cubes are needed to build the shape
- b) how many more are needed to turn it into a cuboid.

- 🚺 Write acute or obtuse for each angle of the quadrilateral.
- Measure each angle to the nearest degree.

Draw the following angles. Label each angle acute, obtuse or reflex.

- 3 137°
- 63°
- 262°
- 191°
- 29°
- 158°
- 6 306°
- 44°

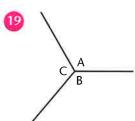

Find the new time if the hour hand of a clock turns:

- 🕕 180° from 10 am
- 🔟 90° from 11pm
- 360° from 4 pm
- 180° from 7 pm.

How many degrees is the turn clockwise from:

- 1 E to S
- 16 NW to NW
- SW to NE
- SE to SW?

Place the angles meeting at each point in order of size, smallest first.

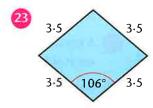

Construct and identify these shapes. (Lengths in cm)

These lines are the diagonals of quadrilaterals. Construct and identify each shape. (Dashes show equal lines.)

Identify each shape and write the number of faces, edges and vertices each has.

Plot each set of co-ordinates on a 6×6 grid and join up the points in the order given. Draw the mirror line and sketch the reflection of the shape.

- 🚳 (1, 0) (2, 2) (4, 2) (5,0)(1,0)Mirror line (0, 3) to (6, 3)
- **33** (4, 3) (4, 6) (6, 2) (4, 3) Mirror line (3, 0) to (3, 6)
- ${\color{red} \mathbf{60}}$ Draw a new 6 imes 6 grid. Plot these co-ordinates and join them up in the order given
 - (3, 2) (4, 4) (5, 3) (3, 2)
- Translate the triangle:
 - a) Left 3 Up 2
 - b) Right 1 Down 2
- Give the co-ordinates of the new positions of the triangle.

MENTAL TESTS 148

TEST 1

- Multiply 50 by 400.
- 2 What is 0.09 less than 1?
- What needs to be added to 58 to make 111?
- 4 A rectangle is 8 cm long and has an area of 48 cm². What is its width?
- S Round 123 519 to the nearest thousand.
- \bigcirc Find the difference between 8^2 and 3^2 .
- Add 42 000 to 163 219.
- 8 Write two hundred and ninety thousand and sixty-two in figures.
- Find the lowest common multiple of 9 and 12.
- 10 Write eight thirds as a mixed number.
- One parcel weighs 1.6 kg. Another weighs 740 g. What is their combined weight in kilograms?
- Write down all the prime numbers between 50 and 60.
- Subtract 2700 from 300 000.
- Give the value of each of the eights in 11.818.
- (15) Write 847 in Roman numerals.
- 10 How many eights are equal to 720?
- What is 3009 more than 100 847?
- What is the sum of a quarter and seven twelfths?
- What is 13 multiplied by 21?
- Find five sixths of 24.
- What distance is 1000 times greater than 0.025 km?
- Find the new time if the hour hand of a clock turns 180° from 7 pm.
- Which number squared gives 121?
- What number is 100 times greater than 620?

TEST 2

- What is 900 times 7?
- Divide 164.5 by 100.
- Write 964 in Roman numerals.
- 4 What needs to be added to 0.63 to make 1?
- Find the highest common factor of 30 and 75.
- 6 Add 283 and 76.
- Lee spends £3.57. He pays £10. How much change is he given?
- Write 508 037 in words.
- Which number multiplied by 12 makes 840?
- There are 32 chess pieces. Three eighths have been taken. How many pieces are left on the board?
- Find the twentieth multiple of 6.
- What is 90²?
- (B) What is 3800 more than 14 675?
- Find one tenth less than four fifths.
- Round 362 450 to the nearest hundred thousand.
- A square has an area of 400 cm². How long is each side?
- 🚺 Write 9% as a decimal.
- What is the difference between 10 000 and 4982?
- Write three and two fifths as an improper fraction.
- 40 Holly walks 1.35 km. Tania cycles 1.8 km further. How long is Tania's journey?
- Take 5500 from 401 740.
- 22 How many degrees is the turn clockwise from SE to SW?
- What is 10 cubed?
- A bottle holds 5 litres of water.

 1-25 litres is used. How much is left?
